ap computer science a exam 2022 pdf: Computational Thinking: A Perspective on Computer Science Zhiwei Xu, Jialin Zhang, 2022-01-01 This textbook is intended as a textbook for

one-semester, introductory computer science courses aimed at undergraduate students from all disciplines. Self-contained and with no prerequisites, it focuses on elementary knowledge and thinking models. The content has been tested in university classrooms for over six years, and has been used in summer schools to train university and high-school teachers on teaching introductory computer science courses using computational thinking. This book introduces computer science from a computational thinking perspective. In computer science the way of thinking is characterized by three external and eight internal features, including automatic execution, bit-accuracy and abstraction. The book is divided into chapters on logic thinking, algorithmic thinking, systems thinking, and network thinking. It also covers societal impact and responsible computing material - from ICT industry to digital economy, from the wonder of exponentiation to wonder of cyberspace, and from code of conduct to best practices for independent work. The book's structure encourages active, hands-on learning using the pedagogic tool Bloom's taxonomy to create computational solutions to over 200 problems of varying difficulty. Students solve problems using a combination of thought experiment, programming, and written methods. Only 300 lines of code in total are required to solve most programming problems in this book.

ap computer science a exam 2022 pdf: Student and Teacher Writing Motivational Beliefs Steve Graham, Gary A. Troia, Gustaf Bernhard Uno Skar, 2024-06-21 The study of students' motivational beliefs about writing and how such beliefs influence writing has increased since the publication of John Hays' 1996 model of writing. This model emphasized that writers' motivational beliefs influence how and what they write. Likewise, increased attention has been devoted in recent years to how teachers' motivational beliefs about writing, especially their efficacy to teach writing, impact how writing is taught and how students' progress as writers. As a result, there is a need to bring together, in a Research Topic, studies that examine the role and influence of writing beliefs. Historically, the psychological study of writing has focused on what students' write or the processes they apply when writing. Equally important, but investigated less often, are studies examining how writing is taught and how teachers' efforts contribute to students' writing. What has been less prominent in the psychological study of writing are the underlying motivational beliefs that drive (or inhibit) students' writing or serve as catalysts for teachers' actions in the classroom when teaching writing. This Research Topic will bring together studies that examine both students' and teachers' motivational beliefs about teaching writing. This will include studies examining the operation of such beliefs, how they develop, cognitive and affective correlates, how writing motivational beliefs can be fostered, and how they are related to students' writing achievement. By focusing on both students' and teachers' beliefs, the Research Topic will provide a more nuanced and broader picture of the role of motivation beliefs in writing and writing instruction. This Research Topic includes papers that address students' motivational beliefs about writing, teachers' motivational beliefs about writing or teaching writing. Students' motivational beliefs about writing include: • beliefs about the

value and utility of writing, • writing competence, • attitudes toward writing, • goal orientation, • motives for writing, • identity, • epistemological underpinnings writing, • and attributions for success/failure (as examples). Teacher motivational include these same judgements as well as beliefs about their preparation and their students' competence and progress as writers (to provide additional examples). This Research Topic is interested in papers that examine how such beliefs operate, develop, are related to other cognitive and affective variables, how they are impacted by instruction, and how they are related to students' writing performance. Submitted studies can include original research (both quantitative, qualitative, or mixed-methods), meta-analysis, and reviews of the literature.

ap computer science a exam 2022 pdf: How to Enhance Learning Efficiency When Online Learning is Popular and Indispensable: Theory, Research and Practice Rong Lian, Chang Liu , Juzhe Xi, 2024-07-17 Online learning has become more and more common globally, whether for comfort, adapting to work hours or just having the freedom to study from anywhere. And now under the coronavirus pandemic, as people are having to stay at home, it has become more important than ever. Although the popularity of wireless network and portable smart device makes it possible for people to acquire and learn knowledge anytime and anywhere, it does not necessarily mean an increased learning performance. Relevant research in cognitive science has revealed possible limitations in online learning. For example, the knowledge acquired through online learning tends to be fragmented and lacks guidance for integrated thinking among different subjects, which makes it difficult for learners to form a systematic knowledge structure. Learners may experience cognitive overload, metacognitive illusion and low learning efficiency in self-regulated learning. It follows that, in the post COVID-19 era, online learning puts forward new requirements and challenges to the contemporary students, not only to their learning strategies but positive character traits in learning. Most of the current learning theories were developed in the early 20th century and may not fit in well with the current situation, then possibly leading to inefficient learning and increased learning burden. Therefore, it is necessary and important to reexplore the influencing factors and mechanisms that affect the learning efficiency of students at all levels nowadays, based on which we could construct a theoretical model of efficient learning model.
