- **Answer:** Bacteria decompose organic matter, recycling nutrients back into the ecosystem.

Question 4: What is antibiotic resistance, and why is it a concern?

- **Answer:** Antibiotic resistance occurs when bacteria evolve mechanisms to survive antibiotics, making infections harder to treat and increasing the risk of disease spread.

Question 5: Describe a method used to prevent bacterial infections in humans.

- **Answer:** Regular handwashing with soap and water is an effective method to reduce bacterial transmission.

Creating an Effective Bacteria Webquest Answer Key

For educators aiming to develop their own webquest and corresponding answer key, consider these best practices:

Align with Learning Objectives

Ensure that the questions and answers reflect the core learning goals of the lesson, such as understanding bacterial diversity, structure, and their roles.
