- Black: Ground
- Blue: Power antenna or amplifier turn-on
- White/White with Black Stripe: Left front speaker positive/negative
- Gray/Gray with Black Stripe: Right front speaker positive/negative
- Green/Green with Black Stripe: Left rear speaker positive/negative
- Purple/Purple with Black Stripe: Right rear speaker positive/negative

Always verify these colors with the specific wiring diagram for your truck model, as discrepancies can occur.

2. Trace Power and Ground Connections

- Constant Power Line: Connects to the vehicle's battery or fuse box, providing 12V supply that maintains memory.
- Switched Power Line: Connects to ignition switch, ensuring the radio powers on/off with the vehicle.
- Ground: Connects securely to a clean, bare metal chassis point to prevent noise and ensure safety.

3. Locate and Connect Antenna Cable

- Usually a coaxial cable with a specific connector (e.g., Fakra, Motorola).
- Some Kenworth models feature integrated antenna amplifiers, requiring additional wiring.

4. Wiring Speakers

- Follow the color codes to connect each speaker to the appropriate channels.
- Ensure polarity (+/-) is maintained to prevent phase issues and poor sound quality.

5. Connect Auxiliary and Data Cables

- For Bluetooth modules, USB connections, or multimedia interfaces.
- Data lines often require integration with the vehicle's CAN bus system.

Installing a New Radio: Step-by-Step Process
