retailing management levy pdf: Retail Category Management Alexander Hübner, 2011-08-30 Retail shelf management means cost-efficiently aligning retail operations with consumer demand. As consumers expect high product availability and low prices, and retailers are constantly increasing product variety and striving towards high service levels, the complexity of managing retail business and its operations is growing enormously. Retailers need to match consumer demand with shelf supply by balancing variety (number of products) and service levels (number of items of a product), and by optimizing demand and profit through carefully calibrated prices. As a result the core strategic decisions a retailer must make involve assortment sizes, shelf space assignment and pricing levels. Rigorous quantitative methods have emerged as the most promising solution to this problem. The individual chapters in this book therefore focus on three areas: (1) combining assortment and shelf space planning, (2) providing efficient decision support systems for practically

relevant problem sizes, and (3) integrating inventory and price optimization into shelf management.

On the other hand, the study explores the (potential) implications of emerging supermarkets for other food retailers on-site. To this end, the study's focus lies on so-called wet markets (Bengali: kacha bazars) as an exemplary "traditional" food retail format. Here, the study strives for the determination of supermarkets' competitive pressure on kacha bazars in Dhaka, and kacha bazar vendors' corresponding (proactive) coping strategies. The study is based on theoretical and conceptional reflections on markets and market structures, the fundamentals of retail management and modern food retail, and research findings on supermarkets' structural impact on food retail markets in other country contexts.
