Overview of The Lathe of Heaven

Plot Summary

The Lathe of Heaven is set in a near-future version of Portland, Oregon, where mental health and social issues are prevalent. The protagonist, George Orr, discovers that his dreams have the extraordinary ability to alter reality. When he dreams, the world around him transforms accordingly, often with unintended consequences. Recognizing his

power, Orr seeks help from a psychiatrist, Dr. William Haber, who becomes obsessed with harnessing Orr's abilities to shape the world according to his own vision of utopia. However, each of Haber's interventions leads to unforeseen and often disastrous results, highlighting the unpredictable nature of tampering with reality.

The novel explores themes such as the limits of human control, the ethics of power, and the nature of reality itself. As Orr's dreams begin to wield increasing influence, the narrative questions whether any utopia can truly be achieved and whether humans are capable of understanding the full ramifications of their desires.

Themes and Philosophical Questions

Ursula K. Le Guin's *The Lathe of Heaven* delves into profound philosophical issues:

- **Reality and Perception:** The novel blurs the line between dreams and reality, prompting readers to consider the subjective nature of perception.

- **Utopia vs. Dystopia:** The narrative explores whether a perfect world is attainable or whether attempts to perfect society inevitably lead to chaos.
- **The Unpredictability of Change:** Each of Haber's interventions demonstrates that even well-intentioned changes can have unintended, often adverse, effects.

the lathe of heaven pdf: Liquid Life Rachel Armstrong, 2019 If we lived in a liquid world, the concept of a machine would make no sense. Liquid life is metaphor and apparatus that discusses the consequences of thinking, working, and living through liquids. It is an irreducible, paradoxical, parallel, planetary-scale material condition, unevenly distributed spatially, but temporally continuous. It is what remains when logical explanations can no longer account for the experiences that we recognize as part of being alive. Liquid life references a third-millennial understanding of matter that seeks to restore the agency of the liquid soul for an ecological era, which has been banished by reductionist, brute materialist discourses and mechanical models of life. Offering an alternative worldview of the living realm through a new materialist and liquid study of matter, it conjures forth examples of creatures that do not obey mechanistic concepts like predictability, efficiency, and rationality. With the advent of molecular science, an increasingly persuasive ontology of liquid technologies can be identified. Through the lens of lifelike dynamic droplets, the agency for these systems exists at the interfaces between different fields of matter/energy that respond to highly local effects, with no need for a central organizing system. Liquid Life seeks an alternative partnership between humanity and the natural world. It provokes a re-invention of the languages of the living realm to open up alternative spaces for exploration: Rolf Hughes' angelology of language explores the transformative invocations of prose poetry, and Simone Ferracina's graphical notations help shape our concepts of metabolism, upcycling, and designing with fluids. A conceptual and practical toolset for thinking and designing, Liquid Life reunites us with the irreducible soul substance of living things, which will neither be simply solved, nor go away. Rachel Armstrong is Professor of Experimental Architecture at Newcastle University (UK), and has also been a Rising

Waters II Fellow for the Robert Rauschenberg Foundation (April-May 2016), TWOTY futurist in 2015, Fellow of the British Interplanetary Society, and a Senior TED Fellow in 2010. She is also the coordinator of the Living Architecture project, an EU-funded project that establishes the principles for our buildings to share some of the properties of living things, e.g. metabolism, operating at the intersection of architecture, building construction, bio-energy and synthetic biology. She is also the author of *Vibrant Architecture* (De Gruyter, 2015), *Star Ark: A Living, Self-Sustaining Spaceship* (Springer, 2017), and *Soft Living Architecture: An Alternative View of Bio-informed Design Practice* (Bloomsbury, 2018).

the lathe of heaven pdf: Storylistening Sarah Dillon, Claire Craig, 2021-11-16 Storylistening makes the case for the urgent need to take stories seriously in order to improve public reasoning. Dillon and Craig provide a theory and practice for gathering narrative evidence that will complement and strengthen, not distort, other forms of evidence, including that from science. Focusing on the cognitive and the collective, Dillon and Craig show how stories offer alternative points of view, create and cohere collective identities, function as narrative models, and play a crucial role in anticipation. They explore these four functions in areas of public reasoning where decisions are strongly influenced by contentious knowledge and powerful imaginings: climate change, artificial intelligence, the economy, and nuclear weapons and power. Vivid performative readings of stories from *The Ballad of Tam-Lin* to *The Terminator* demonstrate the insights that storylistening can bring and the ways it might be practised. The book provokes a reimagining of what a public humanities might look like, and shows how the structures and practices of public reasoning can evolve to better incorporate narrative evidence. Storylistening aims to create the conditions in which the important task of listening to stories is possible, expected, and becomes endemic. Taking the reader through complex ideas from different disciplines in ways that do not require any prior knowledge, this book is an essential read for policymakers, political scientists, students of literary studies, and anyone interested in the public humanities and the value, importance, and operation of narratives.

the lathe of heaven pdf: New Interventionist Just War Theory Jordy Rocheleau, 2021-11-22 This book offers a systematic critique of recent interventionist just war theories, which have made the recourse to force easier to justify. The work argues that these theories, including neo-traditionalist prerogatives to national leaders and a cosmopolitan human rights paradigm, offer criteria for war that are insufficient in principle and dangerous in practice. Drawing on a plurality of moral considerations, the book recommends a modified legalist national defense paradigm, which includes an atrocity threshold for humanitarian intervention and a legitimate authorization requirement. The plausibility of this restrictive framework is applied to case studies, including the long wars in Iraq and Afghanistan, ongoing targeted killing, and possible interventions in Syria and elsewhere. Various arguments which seek to loosen the criteria for war are also systematically analyzed and criticized. This book will be of much interest to students of just war theory, military history, ethics, political philosophy, and international relations.

the lathe of heaven pdf: Playing Nature Alenda Y. Chang, 2019-12-31 A potent new book examines the overlap between our ecological crisis and video games. Video games may be fun and immersive diversions from daily life, but can they go beyond the realm of entertainment to do something serious—like help us save the planet? As one of the signature issues of the twenty-first century, ecological deterioration is seemingly everywhere, but it is rarely considered via the realm of interactive digital play. In *Playing Nature*, Alenda Y. Chang offers groundbreaking methods for exploring this vital overlap. Arguing that games need to be understood as part of a cultural response to the growing ecological crisis, *Playing Nature* seeds conversations around key environmental science concepts and terms. Chang suggests several ways to rethink existing game taxonomies and theories of agency while revealing surprising fundamental similarities between game play and scientific work. Gracefully reconciling new media theory with environmental criticism, *Playing Nature* examines an exciting range of games and related art forms, including historical and contemporary analog and digital games, alternate- and augmented-reality games, museum exhibitions, film, and science fiction. Chang puts her surprising ideas into conversation with leading media studies and environmental humanities scholars like Alexander Galloway, Donna Haraway, and Ursula Heise, ultimately exploring manifold ecological futures—not all of them dystopian.

the lathe of heaven pdf: Why Teach Philosophy in Schools? Jane Gatley, 2023-03-09 This book presents a case for teaching philosophy in schools. It develops two original arguments for teaching philosophy to all students at some point over the course of their education. Gatley argues that teaching philosophy is the best way to help students to think clearly using ordinary, or non-specialist concepts such as 'good', 'truth', or 'happiness'. She goes on to argue that teaching philosophy is the best way to help students to make sense of the different conceptual schemes used by different school subjects. Combining these two arguments, Gatley suggests that these two roles for philosophy are central to the task of educating people, and so philosophy ought to be included on school curricula. Building on the work of philosophers of education including Richard Stanley Peters, Harry Brighouse, Matthew Lipman, Mary Midgley and Martha Nussbaum, the book covers a range of topics including Philosophy for Children (P4C), the aims of education, religious education, curriculum design and education policy.

the lathe of heaven pdf: *Anthropocene Fictions* Adam Trexler, 2015-04-20 Since the Industrial Revolution, humans have transformed the Earth's atmosphere, committing our planet to more extreme weather, rising sea levels, melting polar ice caps, and mass extinction. This period of observable human impact on the Earth's ecosystems has been called the Anthropocene Age. The anthropogenic climate change that has impacted the Earth has also affected our literature, but criticism of the contemporary novel has not adequately recognized the literary response to this level

of environmental crisis. Ecocriticism's theories of place and planet, meanwhile, are troubled by a climate that is neither natural nor under human control. *Anthropocene Fictions* is the first systematic examination of the hundreds of novels that have been written about anthropogenic climate change. Drawing on climatology, the sociology and philosophy of science, geography, and environmental economics, Adam Trexler argues that the novel has become an essential tool to construct meaning in an age of climate change. The novel expands the reach of climate science beyond the laboratory or model, turning abstract predictions into subjectively tangible experiences of place, identity, and culture. Political and economic organizations are also being transformed by their struggle for sustainability. In turn, the novel has been forced to adapt to new boundaries between truth and fabrication, nature and economies, and individual choice and larger systems of natural phenomena. *Anthropocene Fictions* argues that new modes of inhabiting climate are of the utmost critical and political importance, when unprecedented scientific consensus has failed to lead to action. *Under the Sign of Nature: Explorations in Ecocriticism*

the lathe of heaven pdf: The Case for the Corporate Death Penalty Mary Kreiner Ramirez, Steven A. Ramirez, 2017-01-31 A critical examination of the wrongdoing underlying the 2008 financial crisis An unprecedented breakdown in the rule of law occurred in the United States after the 2008 financial collapse. Bank of America, JPMorgan, Citigroup, Goldman Sachs, and other large banks settled securities fraud claims with the Securities and Exchange Commission for failing to disclose the risks of subprime mortgages they sold to the investing public. But a corporation cannot commit fraud except through human beings working at and managing the firm. Rather than breaking up these powerful megabanks, essentially imposing a corporate death penalty, the government simply accepted fines that essentially punished innocent shareholders instead of senior leaders at the megabanks. It allowed the real wrongdoers to walk away from criminal responsibility. In *The Case for the Corporate Death Penalty*, Mary Kreiner Ramirez and Steven A. Ramirez examine the best available evidence about the wrongdoing underlying the financial crisis. They reveal that the government failed to use its most powerful law enforcement tools despite overwhelming proof of wide-ranging and large-scale fraud on Wall Street before, during, and after the crisis. The pattern of criminal indulgences exposes the onset of a new degree of crony capitalism in which the most economically and political powerful can commit financial crimes of vast scale with criminal and regulatory immunity. A new economic royalty has seized the commanding heights of our economy

through their control of trillions in corporate and individual wealth and their ability to dispense patronage. The Case for the Corporate Death Penalty shows that this new lawlessness poses a profound threat that urgently demands political action and proposes attainable measures to restore the rule of law in the financial sector.

Also studied are the degree to which the law is effectively applied, and a range of other social, economic and cultural factors.
