biology b semester online practice: Class Dismissed Anthony Abraham Jack, 2024-08-13 A revealing account of the entrenched inequities that harm our most vulnerable students and what

colleges can do to help them excel. Elite colleges are boasting unprecedented numbers with respect to diversity, with some schools admitting their first majority-minority classes. But when the twin pandemics of COVID-19 and racial unrest gripped the world, schools scrambled to figure out what to do with the diversity they so fervently recruited. And disadvantaged students suffered. *Class Dismissed* exposes how woefully unprepared colleges were to support these students and shares their stories of how they were left to weather the storm alone and unprotected. Drawing on the firsthand experiences of students from all walks of life at elite colleges, Anthony Abraham Jack reveals the hidden and unequal worlds students navigated before and during the pandemic closures and upon their return to campus. He shows how COVID-19 exacerbated the very inequalities that universities ignored or failed to address long before campus closures. Jack examines how students dealt with the disruptions caused by the pandemic, how they navigated social unrest, and how they grappled with problems of race both on campus and off. A provocative and much-needed book, *Class Dismissed* paints an intimate and unflinchingly candid portrait of the challenges of undergraduate life for disadvantaged students even in elite schools that invest millions to diversify their student body. Moreover, Jack offers guidance on how to make students' path to graduation less treacherous—guidance colleges would be wise to follow.

biology b semester online practice: **Centering Humanism in STEM Education** Bryan Dewsbury, Susannah McGowan, Sheila S. Jaswal , Desiree Forsythe, 2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion, particularly for students with marginalized identities. This poses problems particularly when science permeates every aspect of contemporary American life. Institutions' repeated failures to disrupt systemic oppression in STEM has led to a mostly white, cisgender, and male scientific workforce replete with implicit and/or explicit biases. Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom. Maintaining views on science as inherently objective isolates it from the world in which it is performed. STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students' social and educational capital. We must create a STEM environment in which students with marginalized identities feel respected,

listened to, and valued. We must assist students in understanding how their positionality, privilege, and power both historically and currently impacts their meaning making and understanding of STEM.

biology b semester online practice: Student Belonging in Higher Education Mi Young Ahn, Edward Venn, Tom Lowe, 2025-08-08 Providing sector leading, scholarly informed critical explorations on students' sense of belonging in higher education settings, this key text explores invaluable considerations for contemporary issues to inform institutional policy, pedagogic practice, student education support, and diversity and accessibility practices. Drawing on the research and practical expertise of an international authorship, alongside vital insights from student contributors, this book is both timely and necessary. Responding to the urgent need to understand diverse student populations, chapters explore the dynamics of student experiences at the individual, social, academic, and institutional levels and recognise underlying issues to create solutions to overcome barriers and tensions. Topics such as the multidimensionality of belonging, and its relation to social capital, the role of context, and measurement of belonging are critically discussed in this collection to provide lessons learnt and knowledge from the field, to make practice with students more considered and robust for the challenges ahead in the contemporary and future university. *Student Belonging in Higher Education: Perspectives and Practice* is a must-read for all those interested and invested in the topic of student belonging. It offers evidence-based critical reflections and recommendations for those implementing, exploring, and researching student belonging initiatives to create more inclusive, supportive, and thriving academic communities.

biology b semester online practice: Savoring Gotham , 2015-11-11 When it comes to food, there has never been another city quite like New York. The Big Apple--a telling nickname--is the city of 50,000 eateries, of fish wriggling in Chinatown baskets, huge pastrami sandwiches on rye, fizzy egg creams, and frosted black and whites. It is home to possibly the densest concentration of ethnic and regional food establishments in the world, from German and Jewish delis to Greek diners, Brazilian steakhouses, Puerto Rican and Dominican bodegas, halal food carts, Irish pubs, Little Italy, and two Koreatowns (Flushing and Manhattan). This is the city where, if you choose to have Thai for dinner, you might also choose exactly which region of Thailand you wish to dine in. *Savoring Gotham* weaves the full tapestry of the city's rich gastronomy in nearly 570 accessible, informative A-to-Z entries. Written by nearly 180 of the most notable food experts--most of them New Yorkers--*Savoring Gotham* addresses the food, people, places, and institutions that have made New York cuisine so wildly diverse and immensely appealing. Reach only a little ways back into the city's ever-changing culinary kaleidoscope and discover automats, the precursor to fast food restaurants, where diners in a hurry dropped nickels into slots to unlock their premade meal of choice. Or travel to the nineteenth century, when oysters cost a few cents and were pulled by the bucketful from the Hudson River. Back then the city was one of the major centers of sugar refining, and of brewing, too--48 breweries once existed in Brooklyn alone, accounting for roughly 10% of all the beer brewed in the United States. Travel further back still and learn of the Native Americans who arrived in the area 5,000 years before New York was New York, and who planted the maize, squash, and beans that European and other settlers to the New World embraced centuries later. *Savoring Gotham* covers New York's culinary history, but also some of the most recognizable restaurants, eateries, and culinary personalities today. And it delves into more esoteric culinary realities, such as urban farming, beekeeping, the Three Martini Lunch and the Power Lunch, and novels, movies, and paintings that memorably depict Gotham's foodscapes. From hot dog stands to haute cuisine, each borough is represented. A foreword by Brooklyn Brewery Brewmaster Garrett Oliver and an extensive bibliography round out this sweeping new collection.
