busch gardens physics day: *A Life of Control* Alan L. Graber, Anne W. Brown, Kathleen Wolff, 2021-04-30 Diabetes happens in a life that already has a story. This book, composed of nearly forty personal narratives, based on taped interviews, about the lives of actual patients with diabetes, draws upon the collective experience of an endocrinologist and two nurse practitioners who worked together for twenty-five years. The people who describe their experiences with diabetes range from teenagers to physicians, immigrants, athletes, pregnant women, accountants, a prisoner, and a dairy farmer. They speak of the variety of ways they handle monitoring, diet, insurance coverage, sports, and fashion. Some talk of how they manage to drive trucks for a living or, for recreation, fly airplanes or go spelunking. Many speak frankly of their anxieties and frustrations. The authors acknowledge that both the patient and clinician have a story about their relationship, and describe the richness and tension in their interaction. Families, too, are sources of both support and conflict. These relationships are acknowledged in the organization of the book, which is divided into sections defined by the main elements of diabetes control: patient self-determination, the role of the family, the social situation, and the patient-clinician encounter. The book provides a wealth of information about diabetes, including material on prevention, complications, and new technology, as well as a superb glossary, but it is not intended as a textbook on diabetes or as a self-care manual for patients. Rather the book provides a textured account of the health professional's view of diabetes control and the perspective of the patient whose life is complicated by diabetes.

Along the way, he experiences a cross-section of Israeli life, working in Israel's high-tech sector and attending some of the country's most prestigious universities as well as learning and living in the ghetto-like neighborhoods of the extremely religious. Many of the characters he meets, religious or secular, Sephardic or Ashkenazi, immigrant or native-born, have, in common with the State of Israel itself, the quality of being neither here nor there, caught between different worlds, living in that liminal space between the suns where, according to mystical lore, nothing is quite real and anything is possible. And so this record of one man's time in Israel provides us with a glimpse into the conflicts-between religious and secular, high-tech and Torah, European and Arab-that roil Israeli society and whose resolution will determine the fate of the Land and its people.
