Note: Do not touch the inside of the container or the lid after cleaning to prevent contamination.

Collecting the Urine Sample

Follow these instructions carefully:

1. **Start urinating into the toilet or a designated clean area** for a few seconds (about 2-3 seconds) to clear the urethra of any bacteria or contaminants.
2. **Then, without stopping the flow, bring the sterile collection container into the urine stream** to catch the midstream urine. Aim to fill the container about halfway.
3. **Finish urinating into the toilet** after collecting the sample.
