computer lab bulletin board ideas: *Computer-Mediated Communication* Susan C. Herring, 1996-06-26 Text-based interaction among humans connected via computer networks, such as takes place via email and in synchronous modes such as “chat”, MUDs and MOOs, has attracted considerable popular and scholarly attention. This collection of 14 articles on text-based computer-mediated communication (CMC), is the first to bring empirical evidence from a variety of disciplinary perspectives to bear on questions raised by the new medium. The first section, linguistic perspectives, addresses the question of how CMC compares with speaking and writing, and describes its unique structural characteristics. Section two, on social and ethical perspectives, explores conflicts between the interests of groups and those of individual users, including issues of online sex and sexism. In the third section, cross-cultural perspectives, the advantages and risks of using CMC to communicate across cultures are examined in three studies involving users in East Asia, Mexico, and students of ethnically diverse backgrounds in remedial writing classes in the United States. The final section deals with the effects of CMC on group interaction: in a women’s studies mailing list, a hierarchically-organized workplace, and a public protest on the Internet against corporate interests.

computer lab bulletin board ideas: *Family Dialogue Journals* JoBeth Allen, Jennifer Beaty, Angela Dean, Joseph Jones, Stephanie Smith Mathews, Jen McCreight, Amber M. Simmons, Elyse Schwedler, 2014-04-15 This honest, clearly written, and accessible book shows how to use Family Dialogue Journals (FDJs) to increase and deepen learning across grade levels. Written by K-12 teachers who have been implementing and studying the use of weekly journals for several years, it shares what they have learned and why they have found FDJs to be an invaluable tool for forming effective partnerships with families. Learn from first-hand accounts how students write weekly about one big idea they have studied, ask a family member a related question, and then solicit their writing in the journal. Through these journal entries, they share their family knowledge with classmates while actively engaging with the curriculum. In turn, teachers extend the academic discussion by writing to each family and incorporating their funds of knowledge into classroom lessons—writing about everything from the use of thermometers to life in Michoacán, Mexico. Family participation in the FDJs is remarkably high across ages, ethnicities, and economic realities. “This is an incredibly

readable book that is highly useful for teachers, teacher educators, and university researchers interested in this powerful practice. The descriptions of the classrooms are riveting and exemplify the kind of teaching we would all like to see in every classroom.” —Kathy Schultz, dean and professor, Mills College “Family Dialogue Journals is a beautiful, socially conscious book offering so much wisdom for curriculum, classroom norms, and creating learning-focused contexts. Readers will be immersed in classroom contexts, teachers’ decisionmaking processes, and practical advice about how to foster a humble, genuine, ongoing dialogue built upon mutual respect and openness with their students and students’ families. Family Dialogue Journals doesn’t just demonstrate the power of interpersonal relationships, it links those dialogues and relationships directly to curriculum and supporting students’ critical literacies of both community and academic ways of knowing and being Family Dialogue Journals is a beautiful, socially conscious book offering so much wisdom for curriculum, classroom norms, and creating learning-focused contexts.” —Stephanie Jones, professor, University of Georgia

computer lab bulletin board ideas: The School Administrator's Guide for Supporting Students from Military Families Linda Jacobson, Rami Benbenishty, 2012-09-28 While it is true that children from military families live unique and interesting lives, it is also true that they face many challenges and special circumstances that civilian children and families don't experience. These can include gaps in school attendance and learning due to frequent moves, being separated from a parent who has been deployed, and a sense of isolation in the midst of a civilian community. This evidence-informed guide introduces school administrators to this population and offers tools to help them implement school-wide programs that will support military students' learning. Written in an engaging style by experts in the field, this practical guide includes: Profiles of principals who have created welcoming school environments for military children and parents. Lessons learning from the Department of Defense Education Activity (DoDEA) schools. A chapter on using data to improve school culture for military students. A chapter on education policies that can improve circumstances for military children. Research highlighting how frequent school transitions and parental deployments affect the education of military children.

The book is intended as a development guide for experts in areas other than instructional or educational technology (in other words, experts in cognate areas such as Biology or English or Nursing) rather than as a learning design textbook. The organization of the book reflects the development process for a resource, course, or program - from planning and development through formative evaluation, and identifies trends and issues that faculty or developers might encounter along the way. The account of the process of one faculty member's course development journey illustrates the suggested design guidelines. The accompanying practice guide provides additional information, examples, learning activities, and tools to supplement the text.

computer lab bulletin board ideas: *Readings in Human-Computer Interaction* Ronald M. Baecker, 2014-06-28 The effectiveness of the user-computer interface has become increasingly important as computer systems have become useful tools for persons not trained in computer science. In fact, the interface is often the most important factor in the success or failure of any computer system. Dealing with the numerous subtly interrelated issues and technical, behavioral, and aesthetic considerations consumes a large and increasing share of development time and a corresponding percentage of the total code for any given application. A revision of one of the most successful books on human-computer interaction, this compilation gives students, researchers, and practitioners an overview of the significant concepts and results in the field and a comprehensive guide to the research literature. Like the first edition, this book combines reprints of key research papers and case studies with synthesizing survey material and analysis by the editors. It is significantly reorganized, updated, and enhanced; over 90% of the papers are new. An invaluable resource for systems designers, cognitive scientists, computer scientists, managers, and anyone concerned with the effectiveness of user-computer interfaces, it is also designed for use as a primary or supplementary text for graduate and advanced undergraduate courses in human-computer interaction and interface design. - Human computer interaction--historical, intellectual, and social - Developing interactive systems, including design, evaluation methods, and development tools - The interaction experience, through a variety of sensory modalities including vision, touch, gesture, audition, speech, and language - Theories of information processing and issues of human-computer fit and adaptation
