go jblearning: Physical Activity and Health Jerome Edward Kotecki, 2014 *Physical Activity and Health: An Interactive Approach*, Third Edition serves as a valuable text for understanding the workings of the complex systems within the human body and the multidimensional components of human health. This text presents scientific evidence on the relationship between physical activity and health in a readable and understandable format. Filled with information, guidance, recommendations, and practical applications, it prepares students to identify the aspects of personal behavior that, with modification, can improve their overall health. Together with engaging features that address self-assessment and changing health habits, it charts a path that puts students in control and allows them to decide what to do and how and when to do it.

go jblearning: Principles of Planning, Evaluation, and Research for Health Care Programs () (Kay) M. M. M. Perrin, 2020-10-12 *Principles of Planning, Evaluation, and Research for Health Care Programs* provides a basic understanding of the importance of and the key approaches used to conduct health program research and evaluations. The book also examines ethical and cultural competency issues unique to conducting evaluations. Additionally, it offers an introduction to systems thinking and its implications for evaluating the impact of interventions. Written with the undergraduate in mind, this book is ideal for students pursuing a wide spectrum of health careers. Through activities and case studies, readers will gain a solid foundation for understanding all aspects of evaluation while developing the critical thinking skills needed to dissect peer-reviewed publications as well as popular media health claims.

go jblearning: Exploring Mathematics Craig Johnson, 2014-08 *Exploring Mathematics: Investigations with Functions* is intended for a one- or two-term course in mathematics for college students majoring in the social sciences, English, history, music, art, education, or any of the other majors within liberal arts. The mathematics course of this scope, with an algebra prerequisite, is a popular selection for liberal arts students. This 9-chapter textbook offers modern applications of mathematics in the liberal arts as well as aesthetic features of this rich facet of history and ongoing advancement of human society. With a central theme around the use of the concept of functions, and the inclusion of unique topics and chapters, *Exploring Mathematics* enables students to explore the next level of mathematics. It attempts to answer the questions, How does mathematics help us to better our society and understand the world around us? and What are some of the unifying ideas of mathematics? The central theme helps to impress upon the student the feeling that mathematics is more than a disconnected potpourri of rules and tricks. Although it would be inappropriate to force a functional connection in every single section, the theme is used whenever possible to provide conceptual bridges between chapters. Developing the concept of a function augments the presentation of many topics in every chapter. The Text's Objectives: The author chose the topics based on meeting the specific NCTM curriculum standards to: 1. Strengthen estimation and

computational skills. 2. Utilize algebraic concepts. 3. Emphasize problem-solving and reasoning. 4. Emphasize pattern and relationship recognition. 5. Highlight importance of units in measurement. 6. Highlight importance of the notion of a mathematical function. 7. Display mathematical connections to other disciplines.
