lacourt org forms: Poverty for Profit Anne Kim, 2024-05-28 A Ms. Magazine Most Anticipated Book A devastating investigation into the "corporate poverty complex"—the myriad businesses that profit from the poor Poverty is big business in America. The federal government spends about \$900 billion a year on programs that directly or disproportionately impact poor Americans, including antipoverty programs such as the earned income tax credit, Medicaid, and affordable housing vouchers and subsidies. States and local governments spend tens of billions more. Ironically, these enormous sums fuel the "corporate poverty complex," a vast web of hidden industries and entrenched private-sector interests that profit from the bureaucracies regulating the lives of the poor. From bail bondsmen to dialysis providers to towing companies, their business models depend on exploiting low-income Americans, and their political influence ensures a thriving set of industries where everyone profits except the poor, while U.S. taxpayers foot the bill. In Poverty for Profit, veteran journalist Anne Kim investigates the multiple industries that infiltrate almost every aspect of the lives of the poor—health care, housing, criminal justice, and nutrition. She explains how these businesses are aided by public policies such as the wholesale privatization of government services and the political influence these industries wield over lawmakers and regulators. Supported by original investigative reporting on the lesser-known players profiting from the antipoverty industry, Poverty for Profit adds a crucial dimension to our understanding of how structural inequality and structural racism function today.

Today, more and more relatives are abandoning their dead, leaving it to local governments to dispose of the bodies. Up to 150,000 Americans now go unclaimed each year. Who are they? Why are they being forgotten? And what is the meaning of life if your death doesn't matter to others? In

this extraordinary work of narrative nonfiction, eight years in the making, sociologists Pamela Prickett and Stefan Timmermans uncover a hidden social world. They follow four individuals in Los Angeles, tracing the twisting, poignant paths that put each at risk of going unclaimed, and introducing us to the scene investigators, notification officers, and crematorium workers who care for them when no one else will. *The Unclaimed* lays bare the difficult truth that anyone can be abandoned. It forces us to confront a variety of social ills, from the fracturing of families and the loneliness of cities to the toll of rising inequality. But it is also filled with unexpected moments of tenderness. In Boyle Heights, a Mexican American neighborhood not far from the glitter of Hollywood, hundreds of strangers come together each year to mourn the deaths of people they never knew. These ceremonies, springing up across the country, reaffirm our shared humanity and help mend our frayed social fabric. Beautifully crafted and profoundly empathetic, *The Unclaimed* urges us to expand our circle of caring—in death and in life.

lacourt org forms: Punishment Without Crime Alexandra Natapoff, 2018-12-31 A revelatory account of the misdemeanor machine that unjustly brands millions of Americans as criminals. *Punishment Without Crime* offers an urgent new interpretation of inequality and injustice in America by examining the paradigmatic American offense: the lowly misdemeanor. Based on extensive original research, legal scholar Alexandra Natapoff reveals the inner workings of a massive petty offense system that produces over 13 million cases each year. People arrested for minor crimes are swept through courts where defendants often lack lawyers, judges process cases in mere minutes, and nearly everyone pleads guilty. This misdemeanor machine starts punishing people long before they are convicted; it punishes the innocent; and it punishes conduct that never should have been a crime. As a result, vast numbers of Americans -- most of them poor and people of color -- are stigmatized as criminals, impoverished through fines and fees, and stripped of drivers' licenses, jobs, and housing. For too long, misdemeanors have been ignored. But they are crucial to understanding our punitive criminal system and our widening economic and racial divides. A Publishers Weekly Best Book of 2018

lacourt org forms: Rogue Prosecutors Zack Smith, Charles D. Stimson, 2023-06-27 *Rogue Prosecutors* explains the origins, beliefs, playbook, funding, and real-life consequences of the “progressive prosecutor” movement—a group of newly elected prosecutors, their allies, and backers that refuse to prosecute crimes, hold criminals accountable, and seek justice for victims. Told through true crime stories from eight different cities, the authors explore how a radical movement funded and conceived by George Soros—and ostensibly designed to “reverse engineer” the criminal justice system as we know it—has succeeded in replacing law and order prosecutors with pro-criminal, anti-victim zealots. Weaving together extensive interviews with victims, law enforcement officers, lawyers, and judges, *Rogue Prosecutors* offers a searing portrait of the devastation caused by the policies of these hand-picked activists, how their hands-off approach to prosecution has encouraged lawlessness and eviscerated the relationship with law enforcement, and why minorities have suffered the most in cities with “progressive prosecutors.” In story after story, the authors underscore that justice and public safety require prosecutors to hold all criminals accountable, and that the best choice for district attorney is not necessarily based on partisan politics, but between those who believe in law and order and those who don’t.

lacourt org forms: Denied! Failing Cordelia: Parental Love and Parental-State Theft in Los Angeles Juvenile Dependency Court Simon Cambridge, 2016-12-05 *Pride and Legal Prejudice* is the second part of a trilogy covering the author’s efforts to parent and advocate for his adopted child with severe attachment issues in both Seattle and Los Angeles. Readers will be able to see here how his tenacious efforts to help his daughter would end up being denied or invalidated by the child-welfare legal complex in Los Angeles. How the author fought with pride against the legal prejudice that he and his daughter endured during their traumatic three-year dependency court case in Los Angeles will become the focus of this second volume. The author will conclude that reunifying successfully with one’s child in any dependency case needs to involve more than just being willing to complete an assigned case plan or keeping up with visitation demands. Beyond these worthy goals,

Cambridge will be exploring the many ways in which a strong and motivated legal team that is just as intent on the goal of reunification as the parent, is of paramount importance. Cambridge believes that while he was able to retain his parental rights at the end of their long case, he and his daughter could have forestalled much lasting trauma if their assigned social workers and therapists had been able to “see better” and if the presiding commissioner of his case had been less prejudiced. The author was left still trying to reach his troubled daughter when their dependency case ended. Readers will be able to judge the extent to which he succeeded or made progress in his final volume.

lacourt org forms: Nonlinear Wave and Plasma Structures in the Auroral and Subauroral Geospace Evgeny Mishin, Anatoly Streltsov, 2021-12-03 Nonlinear Wave and Plasma Structures in the Auroral and Subauroral Geospace presents a comprehensive examination of the self-consistent processes leading to multiscale electromagnetic and plasma structures in the magnetosphere and ionosphere near the plasmopause, particularly in the auroral and subauroral geospace. It utilizes simulations and a large number of relevant in situ measurements conducted by the most recent satellite missions, as well as ground-based optical and radar observations to verify the conclusions and analysis. Including several case studies of observations related to prominent geospace events, the book also provides experimental and numerical results throughout the chapters to further enhance understanding of how the same physical mechanisms produce different phenomena at different regions of the near-Earth space environment. Additionally, the comprehensive description of mechanisms responsible for space weather effects will give readers a broad foundation of wave and particle processes in the near-Earth magnetosphere. As such, Nonlinear Wave and Plasma Structures in the Auroral and Subauroral Geospace is a cutting-edge reference for space physicists looking to better understand plasma physics in geospace. - Presents a unified approach to wave and particle phenomena occurring in the auroral and subauroral geospace - Summarizes the most current theoretical concepts related to the generation of the large-scale electric field near the plasmopause by flows of hot plasma from the reconnection site - Includes case studies of the observations related to the most famous events during the last 20 years as well as a large number of experimental and numerical results illustrated throughout the text

Cross-scale coupling has become increasingly important in the Space Physics community. Although large-scale processes can specify the averaged state of the system reasonably well, they cannot accurately describe localized and rapidly varying structures in space in actual events. Such localized and variable structures can be as intense as the large-scale features. This book covers observations on quantifying coupling and energetics and simulation on evaluating impacts of cross-scale processes. It includes an in-depth review and summary of the current status of multi-scale coupling processes, fundamental physics, and concise illustrations and plots that are usable in tutorial presentations and classrooms. Organized by physical quantities in the system, Cross-Scale Coupling and Energy Transfer in the Magnetosphere-Ionosphere-Thermosphere System reviews recent advances in cross-scale coupling and energy transfer processes, making it an important resource for space physicists and researchers working on the magnetosphere, ionosphere, and thermosphere. - Describes frontier science and major science around M-I-T coupling, allowing for foundational understanding of this emerging field in space physics - Reviews recent and key findings in the cutting-edge of the science - Discusses open questions and pathways for understanding how the field is evolving

The central nervous system (CNS) not only has the capacity to affect peripheral immune function, but is also able to sense and process signals from the peripheral immune system. The bi-directional interaction between the CNS and the peripheral immune system has gained great interest as it can help better understand disease pathophysiology as well as improving health and treatment outcomes in patients. On the one hand, inflammatory factors are known to affect CNS functions and to induce neuropsychiatric symptoms, making immune-to-brain communication highly relevant for psychiatric diseases and their treatments. On the other hand, analyzing pathways of brain-to-immune communication will help to understand the pathophysiology of chronic inflammatory disorders and will form the basis for optimizing treatment of these diseases.

lacourt org forms: The Cognitive, Emotional and Neural Correlates of Creativity Matthijs Baas, Carsten K. W. De Dreu, Bernard A. Nijstad, 2015-08-06 Across species, humans have an unsurpassed capacity for creative thought and innovation. Human creativity is at the roots of extraordinary achievements in the arts and sciences, and enables individuals and their groups to adapt flexibly to changing circumstances, to manage complex social relations, and to survive and prosper through social, technological, and medical innovations. The ability to generate novel and potentially useful ideas and problem solutions (viz., creativity) is a key driver of human evolution, and among the most valued and sought after competencies in contemporary societies that struggle with complex problems and compete for technological and economic supremacy. Because creativity provides fitness functionality in both ancestral and contemporary societies, it stands to reason that (i) the human brain evolved to sustain and promote creative thinking and we should be able to identify (ii) the brain circuitries, genetic drivers, and neurohormonal modulators of the human capacity for creative problem solving and original ideation; and (iii) the core cognitive and emotional processes underlying creative thought. In this Research Topic, we bring together a collection of papers to provide an encyclopedic, open access snapshot of the current state of the art on the neural, cognitive, and emotional correlates of creativity.
