Options: A. Capital Expenditure (CapEx) B. Operating Expenditure (OpEx) C. Public Cloud D. Azure Reservations Correct Answer: B. Operating Expenditure (OpEx) Explanation: When moving to a pay-as-you-go subscription model in Azure, the expenditure model transitions to Operating Expenditure (OpEx). In the OpEx model, costs are incurred for services as they are used, which is characteristic of cloud services and pay-as-you-go plans. This approach contrasts with the Capital Expenditure (CapEx) model, which involves upfront investment in physical infrastructure and is more typical of on-premises environments. The shift to OpEx allows for greater flexibility and scalability, as costs are based on actual usage rather than upfront investments. Public cloud is a deployment model, not an expenditure model. Azure Reservations can provide cost savings in Azure, but they are a method of payment within the OpEx model, rather than a separate expenditure model. Capital Expenditures or CapEx is defined as funds used allocated by organizations to obtain, upgrade, and maintain physical assets that are paid upfront, such as data centers. These expenditures are generally nonrecurring and result in the acquisition of permanent assets. The Azure Reservations service is an example of a CapEx model. Operating Expenditures or OpEx is defined as funds that are used by organizations for their day-to-day operations. Think of OpEx as your electricity and water bill. The more you use, the higher the charges. Azure on-demand or pay-as-you-go pricing is an example of an OpEx model. Hence, this correct answer is: Operating expenditure.
