pdf prescription template: ECSCW 2009: Proceedings of the 11th European Conference on Computer Supported Cooperative Work, 7-11 September 2009, Vienna, Austria Ina Wagner, Hilda Tellioglu, Ellen Balka, Carla Simone, Luigina Ciolfi, 2009-08-19 This volume presents the proceedings of ECSCW'09, the 11th European Conference on Computer Supported Cooperative Work. Each conference offers an occasion to critically review our research field, which has been multidisciplinary and committed to high scientific standards, both theoretical and methodological, from its beginning. These proceedings represent discussions and contributions to ongoing challenges. One challenge comes from emerging new technologies connected to 'social computing', gaming, as well as applications supporting citizen participation in their communities. As boundaries between home and work erode with the increased movement of work into home environments, and new applications further blur the once separate conceptions of work and leisure, our intellectual community faces challenges in the ways we think about and study work. Other challenges result from transformations of the world of work itself and the role of IT in these. They have been taken up in in-depth studies of design practice, software development, and manufacturing, as well as in the growing body of research on health care contexts and applications. Finally, there is the question of what is the European perspective in our community and whether it is worthwhile to anchor our research more firmly in such a perspective. Of high relevance to our field is the strong grounding of technology development in an understanding of human activity. The nineteen full papers, four short papers and one discussion paper selected for this conference deal with and reflect on some of these challenges, thus representing the lively debate currently ongoing in our field of research.

pdf prescription template: *The American Welfare State* Brian J. Glenn, 2014-04-03 Through a practical introduction to the policies of the American welfare state—a wide-ranging subject much discussed but seldom described—this concise volume details the four main areas of social welfare policy: housing assistance, nutrition assistance, income assistance, and medical assistance. In plain, approachable language, author Brian Glenn explains, for example, how Section 8 housing vouchers function, what WIC is, the Medicare program, and what Temporary Aid to Needy Families does. It is written in a manner that allows a complete novice to understand these programs in a brisk and comprehensive fashion that is both short enough to assign over a couple of nights in a course and yet detailed enough for the programs to be understood at a quite nuanced level. Due to federalism, many of these programs differ, sometimes dramatically, from locality to locality, and thus in order to understand how these policies function, Glenn looks at the support a poor household would receive in five cities: Boston, Houston, Kansas City, Los Angeles, and New Orleans. This covers not only a geographic spread, but also the range of programs from those on the higher end of the spectrum to those at the lowest levels of support, giving the reader a feel for the range of funding levels and also the variety of different ways programs can be implemented. In short, this book is meant to be a handy little teaching and research tool that a professor can assign over a night or two to fill a huge gap in the literature on a subject that many want to teach but lack the knowledge and resources to do.

This joint conference unites the conferences of the German Association for Medical Informatics, Biometry and Epidemiology (GMDS), the German Society for Epidemiology (DGEpi), the International Epidemiological Association - European Region, and the European Federation for Medical Informatics (EFMI). These societies already have long-standing experience of integrating the disciplines of medical informatics, biometry, epidemiology and health data management. The book contains over 160 papers, and is divided into 14 sections covering subject areas such as: health and clinical information systems; eHealth and telemedicine; big data and advanced analytics; and evidence-based health informatics, evaluation and education, among many others. The book will be of value to all those working in the field of health and interested in finding new ways to enable the collaboration of different scientific disciplines and the establishment of comprehensive methodological approaches.

pdf prescription template: Information Design Alison Black, Paul Luna, Ole Lund, Sue Walker, 2017-01-12 Information Design provides citizens, business and government with a means of presenting and interacting with complex information. It embraces applications from wayfinding and map reading to forms design; from website and screen layout to instruction. Done well it can communicate across languages and cultures, convey complicated instructions, even change behaviours. Information Design offers an authoritative guide to this important multidisciplinary subject. The book weaves design theory and methods with case studies of professional practice from leading information designers across the world. The heavily illustrated text is rigorous yet readable and offers a single, must-have, reference to anyone interested in information design or any of its related disciplines such as interaction design and information architecture, information graphics, document design, universal design, service design, map-making and wayfinding.
