rebound book pdf: Before the Lights Go Out Maggie Koerth-Baker, 2012-02-21 What you need to know now about America's energy future Hi, I'm the United States and I'm an oil-oholic. We have an energy problem. And everybody knows it, even if we can't all agree on what, specifically, the problem is. Rising costs, changing climate, peaking oil, foreign oil, public safety?if the fears are this complicated, then the solutions are bound to be even more confusing. Maggie Koerth-Baker?science editor at the award-winning blog BoingBoing.net?finally makes some sense out of the madness. Over the next 20 years, we'll be forced to cut 20 quadrillion BTU worth of fossil fuels from our energy budget, by wasting less and investing in alternatives. To make it work, we'll need to radically change the energy systems that have shaped our lives for 100 years. And the result will be neither business-as-usual, nor a hippie utopia. Koerth-Baker explains what we can do, what we can't do, and why The Solution is really a lot of solutions working together. This isn't about planting a tree, buying a Prius, and proving that you're a good person. Economics and social incentives got us a country full of gas-guzzling cars, long commutes, inefficient houses, and coal-fired power plants out in the middle of nowhere, and economics and incentives will be the things that build our new world. Ultimately, change is inevitable. Argues we're not going to solve the energy problem by convincing everyone to live like it's 1900 because that's not a good thing. Instead of reverting to the past, we have to build a future where we get energy from new places, use it in new ways, and do more with less. Clean coal? Natural gas? Nuclear? Electric cars? We'll need them all. When you look at the numbers, you'll find that we'll still be using fossil fuels, nuclear, and renewables for decades to come. Looks at new battery technology, smart grids, passive buildings, decentralized generation, clean coal, and carbon sequestration. These are buzzwords now, but they'll be a part of your world soon. For many people, they already are. Written by the cutting edge Science Editor for Boing Boing,

rebound book pdf: *The End of Ownership* Aaron Perzanowski, Jason Schultz, 2018-03-16 An argument for retaining the notion of personal property in the products we “buy” in the digital marketplace. If you buy a book at the bookstore, you own it. You can take it home, scribble in the margins, put it on the shelf, lend it to a friend, sell it at a garage sale. But is the same thing true for the ebooks or other digital goods you buy? Retailers and copyright holders argue that you don't own those purchases, you merely license them. That means your ebook vendor can delete the book from your device without warning or explanation—as Amazon deleted Orwell's 1984 from the Kindles of surprised readers several years ago. These readers thought they owned their copies of 1984. Until, it turned out, they didn't. In *The End of Ownership*, Aaron Perzanowski and Jason Schultz explore how notions of ownership have shifted in the digital marketplace, and make an argument for the benefits of personal property. Of course, ebooks, cloud storage, streaming, and other digital goods offer users convenience and flexibility. But, Perzanowski and Schultz warn, consumers should be aware of the tradeoffs involving user constraints, permanence, and privacy. The rights of private property are clear, but few people manage to read their end user agreements. Perzanowski and Schultz argue that introducing aspects of private property and ownership into the digital marketplace would offer both legal and economic benefits. But, most important, it would affirm our sense of self-direction and autonomy. If we own our purchases, we are free to make whatever lawful use of them we please. Technology need not constrain our freedom; it can also empower us.

rebound book pdf: *Satellite Gravity and the Geosphere* National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Earth Gravity from Space, 1997-10-02 For the past three decades, it has been possible to measure the earth's static gravity from satellites. Such measurements have been used to address many important scientific problems, including the earth's internal structure, and geologically slow processes like mantle convection. In principle, it is possible to resolve the time-varying component of the gravity field by improving the accuracy of satellite gravity measurements. These temporal variations are caused by dynamic processes that change the mass distribution in the earth, oceans, and atmosphere. Acquisition of improved time-varying gravity data would open a new class of important scientific problems to analysis, including crustal motions associated with earthquakes and changes in groundwater levels, ice dynamics, sea-level changes, and atmospheric and oceanic circulation patterns. This book evaluates the potential for using satellite technologies to measure the time-varying component of the gravity field and assess the utility of these data for addressing problems of interest to the earth sciences, natural hazards, and resource communities.

rebound book pdf: Intersections of Nutrition: Retracing Yesterday, Redefining Tomorrow Jossie M. Rogacion, 2023-04-06 The field of pediatric nutrition has grown extensively in terms of discoveries, research, and trends. The 97th Nestlé Nutrition Institute Workshop, which took place on 15-16 June 2022, brought together international experts who examined these developments over the last 100 years and discussed the future directions they envision. The first day focused on the evolution of nutrition research and explored the future of nutritional science research. On the second day, leading scientists and researchers discussed such topics as efforts to map a normal microbiome development trajectory, the impact of human milk oligosaccharide (HMO) supplementation on the infant microbiome, the role of nutritional genomics in a person's response to food, and how low nutrient density foods can lead to malnutrition. Additionally, experts examined the evolution of human milk composition, how dietary patterns of infants influence the risk of noncommunicable diseases later in life, how infants develop their taste preferences and how diet in early life affects future metabolic health and risk of obesity. The key issues covered in the workshop offer valuable insights for healthcare providers, policy makers, and researchers on current and future perspectives in pediatric nutrition, as well as important research priorities for this field.

rebound book pdf: International Network of Global Fiducial Stations National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Board on Earth Sciences and Resources, Committee on Geodesy, Panel on a Global Network of Fiducial Sites, 1991-02-01 The advent of highly precise space-based geodetic techniques has led to the application of these techniques to the solution of global earth and ocean problems. Now under consideration is a worldwide network of interconnected fiducial stations where geodetic as well as other scientific measurements can be made. This book discusses the science rationale behind the concept of an extensive global network of fiducial sites. It identifies geophysical problems that cannot be solved without a global approach and cites geodetic objectives that call for a global deployment of fiducial sites. It concludes with operations considerations and proposes a plan for development of the global network.
