ipc j std 001 pdf: Trade Liberalization and Poverty in the Middle East and North Africa Nicholas Minot, 2009 Agricultural trade liberalization has been resisted by many developing-country policymakers, including those in the Middle East and North Africa, for fear it could hurt domestic farmers and exacerbate poverty. The authors of *Trade Liberalization and Poverty in the Middle East and North Africa* argue, however, that this concern about liberalization might be misplaced. Drawing on case studies from Egypt, Morocco, Syria, and Tunisia, the study uses household survey data and computable general equilibrium models to simulate the effects of various liberalization scenarios on different types of households in these countries, especially poor households. The results indicate that agricultural trade barriers are not an effective means of protecting the poor and that the benefits from many forms of agricultural trade liberalization to the region's consumers outweigh the costs to producers. If complemented with other domestic programs—including agricultural research and extension, information services, disease control, and social safety nets—the reforms have the potential to reduce poverty in these nations. The study findings are a valuable resource for policymakers and development specialists evaluating the role trade liberalization can play in economic development and poverty reduction.

ipc j std 001 pdf: Biofuels for Aviation Christopher Chuck, 2016-06-02 *Biofuels for Aviation: Feedstocks, Technology and Implementation* presents the issues surrounding the research and use of biofuels for aviation, such as policy, markets, certification and performance requirements, life cycle assessment, and the economic and technical barriers to their full implementation. Readers involved in bioenergy and aviation sectors—research, planning, or policy making activities—will benefit from this thorough overview. The aviation industry's commitment to reducing GHG emissions along with increasing oil prices have sparked the need for renewable and affordable energy sources tailored to this sector's very specific needs. As jet engines cannot be readily electrified, turning to

biofuels is the most viable option. However, aviation is a type of transportation for which traditional biofuels, such as bioethanol and biodiesel, do not fulfill key fuel requirements. Therefore, different solutions to this situation are being researched and tested around the globe, which makes navigating this scenario particularly challenging. This book guides readers through this intricate subject, bringing them up to speed with its current status and future prospects both from the academic and the industry point of view. Science and technology chapters delve into the technical aspects of the currently tested and the most promising technology in development, as well as their respective feedstocks and the use of additives as a way of adapting them to meet certain specifications. Conversion processes such as hydrotreatment, synthetic biology, pyrolysis, hydrothermal liquefaction and Fisher-Tropsch are explored and their results are assessed for current and future viability. - Presents the current status of biofuels for the aviation sector, including technologies that are currently in use and the most promising future technologies, their production processes and viability - Explains the requirements for certification and performance of aviation fuels and how that can be achieved by biofuels - Explores the economic and policy issues, as well as life cycle assessment, a comparative techno-economic analysis of promising technologies and a roadmap to the future - Explores conversion processes such as hydrotreatment, synthetic biology, pyrolysis, hydrothermal liquefaction and Fisher-Tropsch

ipc j std 001 pdf: Social Determinants of Health for the Global Aging Population in Pandemic and Disaster Environments Lené Levy-Storms, Mary Beth Morrissey, Marcia G. Ory, Camille

Castelyn, Soohyoung Rain Lee, 2025-02-18 From a biopsychosocial perspective, physical and to a lesser extent mental health have been a priority for researchers, policymakers, and healthcare providers relative to social health. The hegemony of physical health weakened during the COVID pandemic as mental and social health also emerged as equally important and at risk at the same time. Not since the 1960s has society attended to the social vulnerabilities of older adults, particularly in institutional settings. For the first time, the urgency of providing care for older adults has transcended physical settings as frontline workers in hospitals, prisons, schools, and other community-based settings, as well as families in their own homes, also emerged as vulnerable. The institutional care workforce faces an ongoing crisis at the same time some countries have restricted migration, posing a threat to in-home and community-based long-term care. COVID has forced healthcare policymakers to prioritize both acute and long-term health issues simultaneously as society tries to regain full functionality. COVID and future natural and unnatural disasters associated with climate change, threats to democracy, discrimination against societal groups based on age, gender, race/ethnicity, religion, and income status promise to challenge us all to acknowledge and act such that our well-being is everybody's well-being across the life course. We are all aging, and how different age groups fare affects how other age groups fare.

ipc j std 001 pdf: *Sterile Insect Technique* Victor A. Dyck, Jorge Hendrichs, A.S. Robinson, 2021-01-05 The sterile insect technique (SIT) is an environment-friendly method of pest control that integrates well into area-wide integrated pest management (AW-IPM) programmes. This book takes a generic, thematic, comprehensive, and global approach in describing the principles and practice of the SIT. The strengths and weaknesses, and successes and failures, of the SIT are evaluated openly and fairly from a scientific perspective. The SIT is applicable to some major pests of plant-, animal-, and human-health importance, and criteria are provided to guide in the selection of pests appropriate for the SIT. In the second edition, all aspects of the SIT have been updated and the content considerably expanded. A great variety of subjects is covered, from the history of the SIT to improved prospects for its future application. The major chapters discuss the principles and technical components of applying sterile insects. The four main strategic options in using the SIT — suppression, containment, prevention, and eradication — with examples of each option are described in detail. Other chapters deal with supportive technologies, economic, environmental, and management considerations, and the socio-economic impact of AW-IPM programmes that integrate the SIT. In addition, this second edition includes six new chapters covering the latest developments in the technology: managing pathogens in insect mass-rearing, using symbionts and modern molecular technologies in support of the SIT, applying post-factory nutritional, hormonal, and semiochemical treatments, applying the SIT to eradicate outbreaks of invasive pests, and using the SIT against mosquito vectors of disease. This book will be useful reading for students in animal-, human-, and plant-health courses. The in-depth reviews of all aspects of the SIT and its integration into AW-IPM programmes, complete with extensive lists of scientific references, will be of great value to researchers, teachers, animal-, human-, and plant-health practitioners, and policy makers.
