Purpose of the MSE:

- To identify current mental health issues
- To establish a baseline for future comparison
- To aid in diagnosis
- To monitor treatment progress
- To document clinical findings for medico-legal purposes

Why a PDF Example is Useful:

- Offers a template for structured assessment
- Demonstrates standardized terminology
- Provides real-world examples of documentation
- Serves as a learning aid for students and clinicians

Key Components of the Mental Status Examination

The MSE typically covers several domains, each providing vital information about different aspects of mental functioning. A comprehensive example PDF will usually organize these components systematically.

1. Appearance and Behavior

This section describes the patient's physical presentation and observable behaviors.

What to Observe:

- General Appearance: Age, dress, grooming, hygiene
- Posture and Motor Activity: Restlessness, agitation, psychomotor retardation
- Eye Contact: Adequate, poor, excessive
- Facial Expression: Appropriateness, flatness, grimacing
- Speech: Rate, volume, coherence, spontaneity
- Behavioral Abnormalities: Mannerisms, tics, stereotypies

Sample Documentation in PDF:

"Patient appears well-groomed with appropriate attire. Maintains fair eye contact, but exhibits psychomotor retardation. Speech is slow and soft, with decreased spontaneity."

2. Mood and Affect

This domain assesses the patient's emotional state and outward expression.

Mood:

- The patient's subjective feeling state (e.g., sad, anxious, euphoric)

Affect:

- The observable emotional tone (e.g., flat, labile, congruent with mood)

In a PDF example:

"Patient reports feeling 'down' most of the time.' Affect is constricted and mood-congruent, with no evidence of labile or inappropriate affect."

3. Thought Process

Assessment of how thoughts are organized and expressed.

Patterns to note:

- Logical and coherent
- Circumstantial
- Tangential
- Loose associations

- Flight of ideas
- Thought blocking

Sample PDF notes:

Focuses on the themes and ideas within the patient's thoughts.

Key aspects:

- Delusions (persecutory, grandiose, nihilistic)
- Obsessions and compulsions
- Suicidal or homicidal ideation
- Preoccupations or phobias

Example documentation:

"Denies suicidal or homicidal ideation. Reports paranoid delusions about being followed."

5. Perception

Evaluates sensory experiences.

Common findings:

- Hallucinations (auditory, visual, tactile)

mental status examination example pdf: The Psychiatric Mental Status Examination

Paula T. Trzepacz, Robert W. Baker, 1993-08-19 Developed from years of teaching psychiatry to medical students and residents, this comprehensive text devoted solely to describing the mental status examination (MSE) fills a void in the teaching literature and will be valuable to both students first learning about the MSE and seasoned clinicians seeking an informative reference. The introductory chapter offers basic advice on interviewing patients and eliciting information. Six major sections of the MSE follow and are thoroughly described with a chapter devoted to each: Appearance, Attitude, Activity; Mood and Affect; Speech and Language; Thought Content, Thought Process, and Perception; Cognition; and Insight and Judgment. Each chapter lists a detailed definition of reference for students describing their findings, and are an insightful review even for experienced practitioners. The clinical relevance of mental status abnormalities is illustrated through frequent examples of disorders that can cause the particular signs and symptoms defined in each chapter. A final chapter describing fictional case histories with hypothetical examples of written mental status reports will be particularly useful for those learning to write such reports. This text is an important addition to the libraries of students and practitioners who work with psychiatric patients and should help to simplify and organize a challenging task.
