the road less traveled summary pdf: First Things First! Ruby Takanishi, 2016 Challenging policymakers, educators, reformers, and citizens to replace piecemeal reforms with fundamental redesign, *First Things First!* calls for a different way of organizing the American primary school. Ruby Takanishi outlines a new framework for integrating early education with primary education (pre-K-5), including both short- and long-term strategies, that starts with 3- and 4-year-olds. Featuring portraits of primary schools that have successfully integrated pre-K, the book includes resources on dual-language learners, dual-generation family engagement, effective philanthropy, rethinking advocacy, and more. The book centers on four basic questions: Why should the United States design a new primary school as children's first, widely shared educational experience? How can the educators of the new primary school use new knowledge about how children learn to improve their practice? What will it take to create a new primary school that educates all children well? How can the design of the new primary school reflect demographic, social, linguistic, and cultural changes and adapt to the requirements of a global economy? *First Things First!* reframes the basic structure of traditional primary education, challenging us to get the early years of a 21st-century public education system off to a new and stronger start. "The vision of a new primary school model in this book should be studied by all workers in the fields of education, human development, and social policy. The scholarship in this book is impeccable and the arguments advanced by this leading scholar are most convincing. Further, the book is beautifully written." —Edward Zigler, Sterling Professor of Psychology Emeritus, Yale University "Takanishi makes a compelling case that enabling all American children to achieve their potential requires both expansion of high-quality preschool and fundamental changes in how our public elementary schools serve young students." —Sara Mead, Bellwether Education Partners "Dr. Takanishi has laid out a vision and approach to schooling that is comprehensive, forward-looking, and versed in strong evidence. This is must-reading for educators, leaders, policymakers, and researchers." —Arthur Reynolds, University of Minnesota

the road less traveled summary pdf: *Higher Education and Silicon Valley* W. Richard Scott, Michael W. Kirst, 2017-09-01 A data-rich study of the difficult partnerships between the colleges, universities, and businesses of Silicon Valley. Universities and colleges often operate between two worlds: higher education and economic systems. With a mission rooted in research, teaching, and public service, institutions of higher learning are also economic drivers in their regions, under increasing pressure to provide skilled workers to local companies. It is impossible to

understand how current developments are affecting colleges without attending to the changes in both the higher education system and in the economic communities in which they exist. W. Richard Scott, Michael W. Kirst, and colleagues focus on the changing relations between colleges and companies in one vibrant economic region: the San Francisco Bay Area. Colleges and tech companies, they argue, have a common interest in knowledge generation and human capital, but they operate in social worlds that substantially differ, making them uneasy partners. Colleges are a part of a long tradition that stresses the importance of precedent, academic values, and liberal education. High-tech companies, by contrast, value innovation and know-how, and they operate under conditions that reward rapid response to changing opportunities. The economy is changing faster than the postsecondary education system. Drawing on quantitative and historical data from 1970 to 2012 as well as 14 case studies of colleges, this book describes a rich and often tense relationship between higher education and the tech industry. It focuses on the ways in which various types of colleges have endeavored—and often failed—to meet the demands of a vibrant economy and concludes with a discussion of current policy recommendations, suggestions for improvements and reforms at the state level, and a proposal to develop a regional body to better align educational and economic development.

the road less traveled summary pdf: *Leadership Communication* E. Bruce Harrison, Judith Mühlberg, 2014-09-05 My graduate students like this book's real-world focus on public relations as a strategic role in the C-suite. —Ron Culp, professional director, Public Relations & Advertising graduate program, DePaul University; former Senior Vice President, Chief Communication Officer, Sears Leadership in Communication is a cogent, bright, easily readable definition of what corporate communicators do. More than that, it's an uncommonly careful look at how strategic communication defines, drives, and creates value for a commercial enterprise—its employees, its owners, and those whom they serve. —James S. O'Rourke, IV, PhD, Professor of Management, Mendoza College of Business, University of Notre Dame The quality of leadership in any organization—business, social, military, and government—is enhanced or limited by the quality of its leadership communication. The authors assert that leadership is given force by strategic communication that produces results required in competitive conditions. For the professional in enterprise communication, this brings into focus two questions: What is the relevance of communication in the leadership process of reaching best achievable outcomes (BAOs)? And, how does the primary communication professional attain expertise and success in a leadership position? This book provides insights and guidance on functioning at the highest levels of the corporate communications profession.

the road less traveled summary pdf: *Circular Economy for Buildings and Infrastructure* Jian Zuo, Liyin Shen, Ruidong Chang, 2024-05-03 This edited volume covers theoretical and practical aspects of circular economy in building development, offering chapters dealing with topics such as material design, affordability of housing development, waste management and recycling, smart metering, and more. A particular focus is placed on various stakeholders' points of view. The book's chapters are co-developed and contributed by multidisciplinary teams including both academics and industry practitioners. The case study-oriented approach taken here helps to facilitate the reader's understanding of how building sustainability can be achieved in the context of circular economy. The building industry has significant environmental, social and economic impacts. As one of the biggest energy consumers and carbon emitters, building sustainability has attracted wide attention globally. Building projects and their associated activities consume a large amount of energy, natural resources and water while producing a large proportion of wastes throughout their lifecycles. The traditional linear approach of "make, use and dispose" has been heavily criticized, whilst the circular approach has gained momentum. Indeed, circular economy has emerged as one of key principles to manage sustainability related issues by means of focusing on the circularity of resources as well as the cost implications.

the road less traveled summary pdf: [Genome-Based Diagnostics](#) Institute of Medicine, Board on Health Sciences Policy, Roundtable on Translating Genomic-Based Research for Health, 2012-07-27 The sequencing of the human genome and the identification of associations between specific genetic variants and diseases have led to an explosion of genomic-based diagnostic tests. These tests have the potential to direct therapeutic interventions, predict risk or onset of disease, or detect residual disease. As research progresses and an increasing number of associations are found, further tests will be developed that can aid in providing personalized treatment options for patients. However, the adoption of genomic diagnostic tests by health care providers has been limited due to a lack of evidence regarding the clinical utility of many tests. Health funders and practitioners lack the data necessary to distinguish which tests can improve practice or the clinical settings in which tests will provide the greatest value. The Roundtable on Translating Genomic-Based Research for Health held a workshop in November 2010 to determine what evidence is needed and how it is viewed by different stakeholders in order to develop genomic diagnostic tests of clinical value. Genome-Based Diagnostics summarizes the presentations and discussions that took place throughout the workshop. Two presentations, in particular, sparked extensive discussion. One presentation proposed that all genomic diagnostic tests be reviewed and approved by the Food and Drug Administration. The other observed that venture capitalists are no longer investing substantially in the development of genomic diagnostic tests because of a lack of clarity surrounding

regulatory and reimbursement pathways. Both presentations suggested the need for major changes in the systems used to develop, regulate, and reimburse genomic diagnostic tests. The report also presents the perspectives of different stakeholders in the development of genomic diagnostic tests. Each stakeholder group has a different set of needs and issues of importance, yet commonalities among them are apparent, such as the need to put patients and health outcomes at the center of discussion and action.
