accounting 1 final exam: A Five-Year Study of the First Edition of the Core-Plus Mathematics Curriculum Harold Schoen, Steven W. Ziebarth, Christian R. Hirsch, Allison BrckaLorenz, 2010-07-01 The study reported in this volume adds to the growing body of evaluation studies that focus on the use of NSF-funded Standards-based high school mathematics curricula. Most previous evaluations have studied the impact of field-test versions of a curriculum. Since these innovative curricula were so new at the time of many of these studies, students and teachers were relative novices in their use. These earlier studies were mainly one year or less in duration. Students in the comparison groups were typically from schools in which some classes used a Standards-based curriculum and other classes used a conventional curriculum, rather than using the Standards-based curriculum with all students as curriculum developers intended. The volume reports one of the first studies of the efficacy of Standards-based mathematics curricula with all of the following characteristics:

- The study focused on fairly stable implementations of a first-edition Standards-based high school mathematics curriculum that was used by all students in each of three schools.
- It involved students who experienced up to seven years of Standards-based mathematics curricula and instruction in middle school and high school.
- It monitored students' mathematical achievement, beliefs, and attitudes for four years of high school and one year after graduation.
- Prior to the study, many of the teachers had one or more years of experience teaching the Standards-based curriculum and/or professional development focusing on how to implement the curriculum well.
- In the study, variations in levels of implementation of the curriculum are described and related to student outcomes and teacher behavior variables.

Item data and all unpublished testing instruments from this study are available at www.wmich.edu/cmpmp/ for use as a baseline of instruments and data for future curriculum evaluators or Core-Plus Mathematics users who may wish to compare results of new groups of students to those in the present study on common tests or surveys. Taken together, this volume, the supplement at the CPMP Web site, and the first edition Core-Plus Mathematics curriculum materials (samples of which are also available at the Web site) serve as a fairly complete description of the nature and impact of an exemplar of first edition NSF-funded Standards-based high school mathematics curricula as it existed and was implemented with all students in three schools around the turn of the 21st century.

accounting 1 final exam: Convergence of ESP with other disciplines Nadežda Stojković, Gabriela Chmelíková, Ludmila Hurajová, 2019-01-30 In designing a successful English for Specific Purposes (ESP) course, an ESP lecturer must research the professional setting and in turn analyze, abstract and synthesize its linguistic characteristics. Expert vocabulary, typical syntactic structures, relevant morphological word formation processes, exemplary text organization and both written and spoken stylistics are no longer taught with little functional relevance, instead they are approached from a subject-specific perspective. While designing and/ or compiling teaching and learning material, an ESP lecturer must decide upon the appropriate teaching methodology and pedagogy in order to ensure that the course in its entirety simulates a particular professional situation. Only if the course is successful in this aim, will ESP learners be able to quickly engage in uninhibited communication and improve job performance in their field of work, whether that be in tourism or aviation. Although many professional settings share certain characteristics, they are nevertheless unique and often require different approaches. For this reason, there is little or no ready-made teaching material or methodological approaches when it comes to ESP teaching. A dedicated ESP lecturer caters for those idiosyncrasies doing a minute, multifaceted investigation into the linguistic characteristics of the relevant professional domain. Bringing together a collection of essays, this edited volume reveals the variety, depth, and quality of the ESP research and its convergence across different professional disciplines.

accounting 1 final exam: Linked Courses for General Education and Integrative Learning Margot Soven, Dolores Lehr, Siskanna Naynaha, Wendy Olson, 2023-07-03 Research

indicates that of the pedagogies recognized as “high impact”, learning communities – one approach to which, the linked course, is the subject of this book – lead to an increased level of student engagement in the freshman year that persists through the senior year, and improve retention. This book focuses on the learning community model that is the most flexible to implement in terms of scheduling, teacher collaboration, and design: the linked course. The faculty may teach independently or together, coordinating syllabi and assignments so that the classes complement each other, and often these courses are linked around a particular interdisciplinary theme. Creating a cohort that works together for two paired courses motivates students, while the course structure promotes integrative learning as students make connections between disciplines. This volume covers both “linked courses” in which faculty may work to coordinate syllabi and assignments, but teach most of their courses separately, as well as “paired courses” in which two or more courses are team taught in an integrated program in which faculty participate as learners as well as teachers. Part One, Linked Course Pedagogies, includes several case studies of specific linked courses, including a study skills course paired with a worldview course; a community college course that challenges students’ compartmentalized thinking; and a paired course whose outcomes can be directly compared to parallel stand-alone courses. Part Two, Linked Course Programs, includes a description of several institutional programs representing a variety of linked course program models. Each chapter includes information about program implementation, staffing logistics and concerns, curriculum development, pedagogical strategies, and faculty development. Part Three, Assessing Linked Courses, highlights the role of assessment in supporting, maintaining, and improving linked course programs by sharing assessment models and describing how faculty and administrators have used particular assessment practices in order to improve their linked course programs.
