Ces zones douloureuses sont caractérisées par une crispation, un durcissement noueux en forme de cordon

formé par plusieurs fibres musculaires. Souvent associées à des pathologies, ces douleurs sont les plus fréquentes de l'appareil locomoteur. Cet ouvrage fait le point sur la prise en charge thérapeutique de ces douleurs. Il présente de manière didactique, pour chaque zone douloureuse ou point trigger, le symptôme et la thérapie utilisée : Dry Needling qui consiste à piquer avec une aiguille d'acupuncture ou encore thérapie manuelle. Le propos étayé par des encadrés pratiques s'appuie sur une iconographie riche et pertinente composée de nombreux dessins anatomiques et de photos. culaire: The Letter and the Cosmos Laurence de Looze, 2016-08-04 From our first ABCs to the Book of Revelation's statement that Jesus is "the Alpha and Omega," we see the world through our letters. More than just a way of writing, the alphabet is a powerful concept that has shaped Western civilization and our daily lives. In *The Letter and the Cosmos*, Laurence de Looze probes that influence, showing how the alphabet has served as a lens through which we conceptualize the world and how the world, and sometimes the whole cosmos, has been perceived as a kind of alphabet itself. Beginning with the ancient Greeks, he traces the use of alphabetic letters and their significance from Plato to postmodernism, offering a fascinating tour through Western history. A sharp and entertaining examination of how languages, letterforms, orthography, and writing tools have reflected our hidden obsession with the alphabet, *The Letter and the Cosmos* is illustrated with copious examples of the visual and linguistic phenomena which de Looze describes. Read it, and you'll never look at the alphabet the same way again.

LOWENTHAL L'idée de ce Symposium naquit, il y a déjà plusieurs années, lorsque pour la première fois le Docteur C. DE ANDRADE montra au Dr. VAN BOGAERT des malades atteints de polynevrite par paramyloidose. L'idée fut reprise au cours de l'année 1958, à la suite d'une discussion à laquelle participèrent le Dr. VAN BOGAERT, le Dr. NUNES VICENTE, le docteur G. MOYA et moi-même. C'est ainsi que nous avons pensé qu'il pourrait être intéressant de demander à la Commission gouvernementale portugaise chargée d'étudier la polynevrite par paramyloidose, de soumettre ses documents cliniques, anatomiques et biochimiques à d'autres chercheurs qui avaient une grande expérience dans les méthodes qui permettraient de mieux préciser l'origine et la nature du dépôt paramyloïdique. La Commission Portugaise, présidée par le Dr. DA SILVA HORTA, accepta avec enthousiasme cette proposition et c'est ainsi que nous fûmes confiés, en collaboration avec le Dr. NUNES VICENTE, la tâche de dresser les premières listes des participants à ce Symposium et d'envoyer les premières invitations.

culaire: Images of Biologically Active Structures in the Immune System Hilary Koprowski, Fritz Melchers, 2012-12-06 The diversity of antigen-binding structures of antibody molecules is so vast that every conceivable antigen can be bound by an antibody molecule within the immune system. This is true even for the antigen binding sites of antibodies called idiotypes, which are bound by complementary binding sites of other antibodies called anti-idiotypes. Thus, anti-idiotypes are structural homologues of antigens. These idiotype-anti-idiotypic interactions constitute a network within the immune system. Since one lymphocyte produces only one type of antibody molecule, this network is in fact a network of cells. We expect that the network is functional: the appearance of antigen will disturb the equilibrium of the network at the point where it competes with the anti idiotypic lymphocyte for binding to the idiotype lymphocyte. It has been known for quite some time that anti idiotypic antibody can be used to prime the immune system for memory to an antigen that it has never seen. This phenomenon is now being explored for possible use in immunization against viruses, bacteria, parasites and tumors as well as for the modulation of autoimmunity. The ability of anti-idiotypes to mimic, both antigenically and functionally, the corresponding biologically active molecules seen by an idiotype antibody was first demonstrated for the hormone insulin and is now being observed in many other systems. The papers assembled in this volume bring the reader to the cutting edge of the potential practical applications of the network

theory of the immune system.
