learning odyssey compass: Managing the New Tools in K-12 Teaching and Learning Jerome A. Schulz, 2018-02-02 Managing the New Tools in K-12 Teaching and Learning: How Technology Can Enable School Improvement is about how to manage technology for learning at the district and school levels. It provides an overview of the components of learning technology; these include student devices, networking, software productivity toolkits, electronic curricula and resources, and data system infrastructure. And, it discusses how we can manage our technology efforts more effectively to help our students attain the benefits of this technology. The book concludes with case studies of how this is being done at pioneering districts. We are now at a tipping point in implementing learning technology on a larger scale. This is happening very quickly! Historically, learning technology was driven by a strategy of “technology integration,” where we called on individual teachers to each determine how to use technology in their classes and make changes in their own ways of working. But to successfully implement technology on the scale we need requires top-down as well as bottom-up efforts. Managing the New Tools in K-12 Teaching and Learning focuses on how districts and schools can now use technology to bring about the big improvements in learning we are all striving for.

learning odyssey compass: Recipe for a Blue Ribbon School Brent Walker, 2007-02 If you keep doing what you have always done, you will continue to get what you have always gotten. Westside Elementary in Powell, Wyoming, went from mediocre scores on the Wyoming State Test to being one of the top academic schools in the state. In Recipe for a Blue Ribbon School, author and school principal Brent Walker details different interventions that resulted in Westside being recognized as a No Child Left Behind-Blue Ribbon School. Real change requires you to start using what you already have differently. In most cases the changes were not new but a different way of doing things. The staff started using assessment data to drive the schedules, programs, use of time, collaboration, and use of technology to truly focus on each child becoming proficient in reading, math, and writing. In addition, different amounts of learning time were provided for every student. These two paradigm shifts allowed Westside's staff to prove their philosophy: All kids can learn. True change requires trust, courage, and stamina. By working together as a team using a unique collaboration model, the staff of Westside made passive learners into active learners. Discover how you too can help your students achieve academic greatness!

learning odyssey compass: Sustainable School Transformation David Crossley, 2013-10-30 Sustainable School Transformation: An Inside-Out School Led Approach explores how we can best build a truly world class education system. It presents a theoretical and practical case for an alternative approach that combines the rigour of traditional 'top-down' accountability models with the engagement and buy-in of school led 'inside-out' approaches – a combination which can be applied to any school in any context internationally. David Crossley and a range of practitioners and academics draw on their extensive experience of past approaches to school improvement in the UK and US. Rather than reject 'top-down' accountability models, they explore new ways of developing them alongside 'inside-out' school led approaches that really do motivate those in our schools who in the final analysis have to deliver the aspirations of politicians and our wider societies for all our young people. The book is based on the premise that Peter Drucker's notion of addictive achievement, discussed in relation to students in Post Capitalist Society, applies to staff and schools too, and if we want to build a truly world class system it will only be achieved through the motivation and resultant efforts of all those in our schools.
