math jeopardy 5th: Making Teachers Better, Not Bitter Tony Frontier, Paul Mielke, 2016-08-23 In too many districts, evaluation of teachers ensures competence but does little or nothing to encourage and support expertise. In this thought-provoking and groundbreaking book, Tony Frontier and Paul Mielke address this issue head-on, combining the conceptual and the practical by offering a compelling vision of teacher growth, along with nearly three dozen step-by-step protocols for working with teachers. They present a powerful rationale for reconceptualizing teacher evaluation by creating a balanced system of three equally important components: Reliable and valid evaluation. Empowering and focused supervision. Meaningful and purposeful reflection. Each component is discussed in terms of its purpose, premise, processes, practices, and payoffs. Revealing examples based on the authors' experiences in classrooms across the country show what evaluation, supervision, and reflection look like when they're not done well--and what they could look like if done more effectively. Providing insight and inspiration, *Making Teachers Better, Not Bitter* paves a clear path to better teaching and helps you acknowledge and support the hard work that teachers do every day to make learning come alive for their students.

math jeopardy 5th: Performing Math Andrew Fiss, 2020-11-13 *Performing Math* tells the history of expectations for math communication—and the conversations about math hatred and math anxiety that occurred in response. Focusing on nineteenth-century American colleges, this book analyzes foundational tools and techniques of math communication: the textbooks that supported reading aloud, the burnings that mimicked pedagogical speech, the blackboards that accompanied oral presentations, the plays that proclaimed performers' identities as math students, and the written tests that redefined "student performance." Math communication and math anxiety went hand in hand as new rules for oral communication at the blackboard inspired student revolt and as frameworks for testing student performance inspired performance anxiety. With unusual primary sources from over a dozen educational archives, *Performing Math* argues for a new, performance-oriented history of American math education, one that can explain contemporary math attitudes and provide a way forward to reframing the problem of math anxiety.

math jeopardy 5th: Learning with Fractional Orthogonal Kernel Classifiers in Support Vector Machines Jamal Amani Rad, Kourosh Parand, Snehashish Chakraverty, 2023-03-18 This book contains select chapters on support vector algorithms from different perspectives, including mathematical background, properties of various kernel functions, and several applications. The main focus of this book is on orthogonal kernel functions, and the properties of the classical kernel functions—Chebyshev, Legendre, Gegenbauer, and Jacobi—are reviewed in some chapters. Moreover, the fractional form of these kernel functions is introduced in the same chapters, and for ease of use for these kernel functions, a tutorial on a Python package named ORSVM is presented. The book also exhibits a variety of applications for support vector algorithms, and in addition to the classification, these algorithms along with the introduced kernel functions are utilized for solving ordinary, partial, integro, and fractional differential equations. On the other hand, nowadays, the real-time and big data applications of support vector algorithms are growing. Consequently, the Compute Unified Device Architecture (CUDA) parallelizing the procedure of support vector algorithms based on orthogonal kernel functions is presented. The book sheds light on how to use support vector algorithms based on orthogonal kernel functions in different situations and gives a significant perspective to all machine learning and scientific machine learning researchers all around the world to utilize fractional orthogonal kernel functions in their pattern recognition or scientific computing problems.

math jeopardy 5th: Betrayed Laurie H. Rogers, 2011-01-16 In America, more money is spent from all sources on K-12 education than on the U.S. Department of Defense. Why then are so many children suffering what amounts to educational malpractice? Why are they crippled for life with a substandard education and a life-altering vision of themselves as incapable? *Betrayed* is a passionate, well-researched and frank accounting of how a failing public-education system continues to be forced on teachers and students, despite its nearly complete lack of supporting research or successful student outcomes. *Betrayed* roots out the self-styled stakeholders whose personal, professional and financial interests are served by this failing system. It sympathizes with teachers-many of whom aren't allowed to do their jobs, yet are constantly threatened with removal for ineffectiveness or insubordination. *Betrayed* is an expose, but it's also a beacon of commonsense and hope. Through the Square of Effective Learning, *Betrayed* offers practical methods for teachers, parents, advocates and legislators to stand up against this broken system, to effect positive change, and to ensure a good-quality education for all of our children.
