suvu: *Finite Element Approximation of Boundary Value Problems* Franz Chouly, 2024-11-06 This textbook provides an accessible introduction to the mathematical foundations of the finite element method for a broad audience. The author accomplishes this, in part, by including numerous exercises and illustrations. Each chapter begins with a clear outline to help make complex concepts more approachable without sacrificing depth. Structurally, the book begins with the simplest type of finite element method: low order, piecewise continuous, Lagrange finite elements. With this, crucial questions about the stability and approximation errors are answered. Of particular note is the author's coverage of two specific topics that often go overlooked in introductory material. The first is the numerical treatment of boundary conditions, especially the Nitsche technique. The second is a detailed explanation of the discretization error using specific techniques of a posteriori error estimation. With the book's compact yet thorough treatment of these areas, readers will have a clear understanding of how mathematical analysis tools can be used in practice. Finite Element

Approximation of Boundary Value Problems will be suitable as a supplementary textbook in applied mathematics courses for graduate students, and may also be used for self-study.

This work provides grammatical descriptions of this hitherto undescribed language. Fourteen chapters, containing more than 1,400 examples, cover topics in the phonology and morphosyntax of Mavea, with an emphasis on the latter. Of particular interest are examples of individual speaker variation presented throughout the grammar; the presence of three linguo-labials (still used today by a single speaker) that were unexpectedly found before the rounded vowel /o/; and a chapter on numerals and the counting system, which have long been replaced by Bislama's but are remembered by a handful of speakers. Most of the grammatical descriptions derive from a corpus of texts of various genres (conversations, traditional stories, personal histories, etc.) gathered during the author's fieldwork, conducted for eleven months between 2005 and 2007.
