algebra 2 textbook mcgraw hill pdf: *Teaching School Mathematics: Pre-Algebra* Hung-Hsi Wu:, 2016-06-29 This is a systematic exposition of a major part of the mathematics of grades 5 to 8 (excluding statistics), written specifically for Common Core era teachers. It differs from other books for teachers in that the mathematics is correct, in the sense that all the concepts are clearly and correctly defined, and a grade-appropriate explanation (that is, proof) is given for every assertion. For example, it gives a precise definition of percent and explains how to use the definition to do all the standard problems about percent in an entirely routine manner. It also gives a leisurely explanation for “negative times negative is positive”. Another key feature is an intuitive introduction to plane geometry via rotations, translations, reflections, and dilations that, instead of treating these transformations as merely fun activities, shows how they make sense of the usual geometric topics in middle school, including congruence, similarity, length, area, and volume. In short, the readers will find in this volume a clear explanation of whatever was once puzzling to them in the mathematics of grades 5 to 8.

algebra 2 textbook mcgraw hill pdf: *Het practicum wiskunde: coöperatief aanleren van vaardigheden en attitudes* Koen De Naeghel, 2013-03-13 Het volgen van een leerplan betekent meer dan het realiseren van de inhoudelijke doelstellingen. De leerlingen horen ook wiskundige vaardigheden te verwerven en (leer)attitudes ontwikkelen. Daarnaast dringt de overdracht van competenties zich ook vanuit de maatschappij op: probleemoplossend denken, kritische zin, onderscheid maken tussen hoofd- en bijzaken, samenwerken... In dit boek bieden we het practicum wiskunde aan: een werkvorm voor wiskundeonderwijs in de derde graad met als doel het vaststellen, aanleren, stimuleren, evalueren en opvolgen van vaardigheden en attitudes bij leerlingen. De didactische methode coöperatief leren staat hierbij centraal: bij het uitvoeren van de practica leren de leerlingen van de interactie met elkaar. Enkele onderwerpen die aan bod komen, zijn probleemoplossend denken, leren uit opgeloste problemen, werken met een wiskundig model, realiseren van onderzoekscompetenties, maken van een wetenschappelijk verslag en geven van een wetenschappelijke presentatie.
