all summer in a day pdf: [Cultivating Sustainability in Language and Literature Pedagogy](#)
Roman Bartosch, 2021-03-30 This book introduces the notion of 'educational ecology' as a necessary and promising pedagogic principle for the teaching of Anglophone literatures and cultures in a time of climate change. Drawing on scholarship in the environmental humanities and practice-oriented research in education and literature pedagogy, chapters address the challenges of climate change and the demand for sustainability and environmental pedagogy from the specific perspective of literary and cultural studies and education, arguing that these perspectives constitute a crucial element of the transdisciplinary effort of 'cultivating sustainability.' The notion of an 'educational ecology' takes full advantage of the necessarily dialogic and co-constitutive nature of sustainability-related pedagogical philosophy and practice while it retains the subject-specific focus

of research and education in the humanities, centring on and excelling in critical thinking, perspective diversity, language and discourse awareness, and the literary and cultural constructions of meaning. This book will be of great interest to academics, researchers and post-graduate students in the fields of language, literature and culture pedagogy, as well as transdisciplinary researchers in the environmental humanities.

recommendation that every math student should study statistics and probability with an emphasis on data analysis, accomplished authors Jay Devore and Kenneth Berk make statistical concepts and methods clear and relevant through careful explanations and a broad range of applications involving real data. The main focus of the book is on presenting and illustrating methods of inferential statistics that are useful in research. It begins with a chapter on descriptive statistics that immediately exposes the reader to real data. The next six chapters develop the probability material that bridges the gap between descriptive and inferential statistics. Point estimation, inferences based on statistical intervals, and hypothesis testing are then introduced in the next three chapters. The remainder of the book explores the use of this methodology in a variety of more complex settings. This edition includes a plethora of new exercises, a number of which are similar to what would be encountered on the actuarial exams that cover probability and statistics. Representative applications include investigating whether the average tip percentage in a particular restaurant exceeds the standard 15%, considering whether the flavor and aroma of Champagne are affected by bottle temperature or type of pour, modeling the relationship between college graduation rate and average SAT score, and assessing the likelihood of O-ring failure in space shuttle launches as related to launch temperature.

all summer in a day pdf: Heaven Does Not Block All Roads Anna Beth Keim, 2025-04-17 Huang Chin-tao was born in 1926, when Taiwan was still part of the Japanese Empire. By the time he died in 2019, Taiwan was a bustling, high-tech democracy-and Huang had lived through every twist and turn along the way. He served as a Japanese soldier in China during World War II; joined an armed uprising against Taiwan's Chinese Nationalist post-war government; spent twenty-four years imprisoned during the island's decades of martial law; and finally emerged to help lead the pro-democracy movement of the 1980s in his hometown, Taichung. Drawing upon archives, memoirs, interviews and more, Anna Beth Keim tells the story of Taiwan through the journey of one extraordinary individual. From his childhood scuffling with Japanese children to his transformation into a 'democracy farmer', Huang's life vividly reflects contemporary Taiwanese history, and continues to inspire young Taiwanese today who are fighting to keep their home independent. Over roughly a century, the island transitioned from an imperial outpost to an authoritarian state to a democracy-one still at risk of being snuffed out by China. This story is uniquely Taiwanese, yet illuminates experiences shared by countries everywhere: of colonisation and its aftermath, and the ongoing struggle to be free.

all summer in a day pdf: *Data and Goliath* Bruce Schneier, 2015-03-02 “Bruce Schneier’s amazing book is the best overview of privacy and security ever written.”—Clay Shirky Your cell phone provider tracks your location and knows who’s with you. Your online and in-store purchasing patterns are recorded, and reveal if you’re unemployed, sick, or pregnant. Your e-mails and texts expose your intimate and casual friends. Google knows what you’re thinking because it saves your private searches. Facebook can determine your sexual orientation without you ever mentioning it. The powers that surveil us do more than simply store this information. Corporations use surveillance to manipulate not only the news articles and advertisements we each see, but also the prices we’re offered. Governments use surveillance to discriminate, censor, chill free speech, and put people in danger worldwide. And both sides share this information with each other or, even worse, lose it to cybercriminals in huge data breaches. Much of this is voluntary: we cooperate with corporate surveillance because it promises us convenience, and we submit to government surveillance because it promises us protection. The result is a mass surveillance society of our own making. But have we given up more than we’ve gained? In *Data and Goliath*, security expert Bruce Schneier offers another path, one that values both security and privacy. He brings his bestseller up-to-date with a new preface covering the latest developments, and then shows us exactly what we can do to reform government surveillance programs, shake up surveillance-based business models, and protect our individual privacy.
