navy midterm examples: Understanding the 2022 U.S. Midterm Congressional Elections

Joel Sievert, James C. Garand, Bruce I Newman, 2025-06-27 This book brings together a group of respected congressional election scholars to explore how and why the 2022 midterm congressional elections unfolded as they did. The 2022 midterm congressional elections were full of surprises. Most political observers expected the Republicans to gain substantial majority in House of Representatives, but instead, they secured a narrow majority in the House and lost control of the Senate. So, what happened? Did former President Donald Trump have a negative effect on Republican prospects in both the House and Senate? What was the role of recent abortion decisions by the U.S. Supreme Court in shaping outcomes in House and Senate elections? Did redistricting play a major part in shaping the electoral context in a way that favoured one party or the other?

What about candidate quality— that is, did variation in the quality of congressional candidates matter? What was the role of social media in the 2022 congressional elections? In this book, the authors explore these important questions. This book will appeal to scholars, students, and political analysts interested in U.S. elections, contemporary U.S. politics, public policy, and political behaviour. The chapters in this book were originally published as a special issue of Journal of Political Marketing.

navy midterm examples: Earth Science and Applications from Space National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Assessment of NASA's Earth Science Program, 2012-09-03 Understanding the effects of natural and human-induced changes on the global environment and their implications requires a foundation of integrated observations of land, sea, air and space, on which to build credible information products, forecast models, and other tools for making informed decisions. The 2007 National Research Council report on decadal survey called for a renewal of the national commitment to a program of Earth observations in which attention to securing practical benefits for humankind plays an equal role with the quest to acquire new knowledge about the Earth system. NASA responded favorably and aggressively to this survey, embracing its overall recommendations for Earth observations, missions, technology investments, and priorities for the underlying science. As a result, the science and applications communities have made significant progress over the past 5 years. However, the Committee on Assessment of NASA's Earth Science Program found that the survey vision is being realized at a far slower pace than was recommended, principally because the required budget was not achieved. Exacerbating the budget shortfalls, NASA Earth science programs experienced launch failures and delays and the cost of implementing missions increased substantially as a result of changes in mission scope, increases in launch vehicle costs and/or the lack of availability of a medium-class launch vehicle, under-estimation of costs by the decadal survey, and unfunded programmatic changes that were required by Congress and the Office of Management and Budget. In addition, the National Oceanic and Atmospheric Administration (NOAA) has made significant reductions in scope to its future Earth environmental observing satellites as it contends with budget shortfalls. **Earth Science and Applications from Space: A Midterm Assessment of NASA's Implementation of the Decadal Survey** recommends a number of steps to better manage existing programs and to implement future programs that will be recommended by the next decadal survey. The report also highlights the urgent need for the Executive Branch to develop and implement an overarching multiagency national strategy for Earth observations from space, a key recommendation of the 2007 decadal survey that remains unfulfilled.

navy midterm examples: *National Defense Budgeting and Financial Management* Philip J. Candreva, 2017-05-01 The U.S. Department of Defense accounts for over half of federal government

discretionary spending and over 3% of GDP. Half of all federal employees work for the Department. The annual budget for the military not only provides for those salaries, it covers the baseline and wartime operating expenses of the force, and hundreds of billions of dollars of investment in new capabilities and technologies. Given the materiality of the defense function and amount of resources it consumes, the processes for budgeting for defense and managing the funds is important to understand. This text provides a fully integrated view of defense budgeting. It takes the position that defense budgeting is a specific instance of public budgeting, and public budgeting is a specific instance of public policy. In order to fully understand how the nation budgets for defense, it first lays a theoretical and conceptual foundation for public policy and public budgeting. That is followed by an assessment of the political and policy context for defense, including the overarching federal budget process and role of Congress in setting defense policy. Only then does the text explore the specifics of defense budgeting: how, by whom, and why the budget is crafted. Beyond the topic of budgeting - formulating, requesting, and legitimating the request for funds - the book tackles financial management topics. Included are discussions of federal appropriations law, funds management, accounting requirements, intragovernmental business transactions, and contemporary topics of defense policy such as funding overseas contingency operations in an era of deficit control legislation. This book is an appropriate reference for both students and practitioners of defense budgeting and financial management. It would also be appropriate in a general public budgeting course. Most public budgeting texts focus on state and municipal governments and there are few that address the federal system. This book fills that gap and provides a specific example of federal budgeting.
