piranesi pdf: The Ruins Lesson Susan Stewart, 2020-01-15 How have ruins become so valued in Western culture and so central to our art and literature? Covering a vast chronological and geographical range, from ancient Egyptian inscriptions to twentieth-century memorials, Susan Stewart seeks to answer this question as she traces the appeal of ruins and ruins images, and the lessons that writers and artists have drawn from their haunting forms. Stewart takes us on a sweeping journey through founding legends of broken covenants and original sin, the Christian appropriation of the classical past, and images of decay in early modern allegory. Stewart looks in depth at the works of Goethe, Piranesi, Blake, and Wordsworth, each of whom found in ruins a means of reinventing his art. piranesi pdf: The Digital Archives Handbook Aaron D. Purcell, 2019-02-08 The Digital Archives Handbook provides archivists a roadmap to create and care for digital archives. Written by archival experts and practitioners, Purcell brings together theoretical and practical approaches to creating, managing, and preserving digital archives. The first section is focused on processes and practices, including chapters on acquisitions, appraisal, arrangement, description, delivery, preservation, forensics, curation, and intellectual property. The second section is focused on digital collections and specific environments where archivists are managing digital collections. These chapters review digital collections in categories including performing arts, oral history, architectural and design records, congressional collections, and email. The book discusses the core components of digital archives—the technological infrastructure that provides storage, access, and long-term preservation; the people or organizations that create or donate digital material to archives programs, as well as the researchers use them; and the digital collections themselves, full of significant research content in a variety of formats with a multitude of research possibilities. The chapters emphasize that the people and the collections that make up digital archives are just as important as the technology. Also highlighted are the importance of donors and creators of digital archives. Building digital archives parallels the cycle of donor work—planning, cultivation, and stewardship. During each stage, archivists work with donors to ensure that the digital collections will be arranged, described, preserved, and made accessible for years to come. Archivists must take proactive and informed actions to build valuable digital collections. Knowing where digital materials come from, how those materials were created, what materials are important, what formats or topical areas are included, and how to serve those collections to researchers in the long term is central to archival work. This handbook is designed to generate new discussions about how archivists of the twenty-first century can overcome current challenges and chart paths that anticipate, rather than merely react to, future donations of digital archives.

piranesi pdf: Critical Practices in Architecture Jonathan Bean, Susannah Dickinson, Aletheia Ida, 2020-01-06 This book embraces the idea that in today's complex world, multiple, emerging perspectives are critical to the design fields, the environment, and society. It also brings authors into conversation to focus on the built environment from the perspective of critical practice. The authors take as a starting point Jane Rendell's ground-breaking work, which defines critical spatial practice as "self-reflective modes of thought that seek to change the world." In opposition to conventional conceptions of architectural education and work, this book reflects how socially engaged architects, landscape architects, designers, urbanists, and artists take up critical spatial practice. Bridging ideas from multiple countries and approaches to design scholarship, each chapter seeks to find places of convergence for the multiple strands that form around themes of practice, equality, methods, theory, ethics, pedagogy, and representation. Rendell's foreword and postscript provide context for these themes and suggest a way forward in today's challenging, changing times.

piranesi pdf: Travel, Time, and Space in the Middle Ages and Early Modern Time

Albrecht Classen, 2018-10-22 Research on medieval and early modern travel literature has made great progress, which now allows us to take the next step and to analyze the correlations between the individual and space throughout time, which contributed essentially to identity formation in many different settings. The contributors to this volume engage with a variety of pre-modern texts, images, and other documents related to travel and the individual's self-orientation in foreign lands and make an effort to determine the concept of identity within a spatial framework often determined by the meeting of various cultures. Moreover, objects, images and words can also travel and connect people from different worlds through books. The volume thus brings together new scholarship focused on the interrelationship of travel, space, time, and individuality, which also includes, of course, women's movement through the larger world, whether in concrete terms or through proxy travel via readings. Travel here is also examined with respect to craftsmen's activities at various sites, artists' employment for many different projects all over Europe and elsewhere, and in terms of metaphysical experiences (catabasis).

piranesi pdf: This Thing Called Theory Teresa Stoppani, Giorgio Ponzio, George Themistokleous, 2016-11-10 In the age of post-digital architecture and digital materiality, *This Thing Called Theory* explores current practices of architectural theory, their critical and productive role. The book is organized in sections which explore theory as an open issue in architecture, as it relates to and borrows from other disciplines, thus opening up architecture itself and showing how architecture is inextricably connected to other social and theoretical practices. The sections move gradually from the specifics of architectural thought – its history, theory, and criticism – and their ongoing relation with philosophy, to the critical positions formulated through architecture's specific forms of expression, and onto more recent forms of architecture's engagement and self-definition. The book's thematic sessions are concluded by and interspersed with a series of shorter critical position texts, which, together, propose a new vision of the contemporary role of theory in architecture. What emerges, overall, is a critical and productive role for theory in architecture today: theory as a proposition, theory as task and as a 'risk' of architecture.
