ple web: The Complex Web of Inequality in North American Schools Gilberto Q. Conchas, Briana M. Hinga, Miguel N. Abad, Kris D. Gutierrez, 2019-08-22 The Complex Web of Inequality in North American Schools analyzes and challenges the critical gaps and inequalities that persist in the American school system. Showing how historical biases have been inherited in current policies relating to non-dominant youth, the text calls for educational reforms that perform in the name of social justice. This edited collection carefully interrogates how technocratic educational policies and reforms are often unequipped to address the interplay of political, social, economic, ideological factors that are at the roots of educational injustice. Considering the most vulnerable student populations, original case studies explore how inadequate structures, practices, and beliefs have increased marginalization, and highlight those instances in which policy has proved effective in reducing opportunity gaps between economically rich and poor students; between white, Asian, Black and Latino youth; between native English speakers and second language learners; highlighting racial integration and unequal American Indian education; and for students with special educational needs. The insights into such policies shed light on the complex web of historically embedded inequities that continue to shape the construction, roll-out, and consequences of education policy for the most marginalized youth populations today. This volume will be of interest to graduate, and postgraduate students, researchers and academics in the fields of education policy, sociology of education, economics of education, and history of education, and well as policy evaluation.

ple web: The Development of Personal Learning Environments in Higher Education Yilin Sun, Xiaoshu Xu, 2024-03-08 The Development of Personal Learning Environments in Higher Education explores how today's knowledge-based, learner-centered virtual platforms, which often limit teaching to a complimentary facilitation role, can compromise with the requirements and regulations of colleges and universities. Personal Learning Environments (PLEs) driven by culturally responsive teaching and learner autonomy represent a shift in the higher education paradigm, but how can scholars, designers, administrators, and faculty ensure effective, institutionally compatible construction and management of these systems? This book offers forward-thinking insights into the variety of student-centered learning interactions, particularly culturally and linguistically responsive pedagogies, that can be integrated into PLEs. Attending to quality assessment rubrics, the nuances of stakeholders' needs, and theoretically sound frameworks, these cross-cultural, interdisciplinary chapters explore how leaders, instructors, technologists, and learners can form a precise yet flexible ecosystem to fully realize PLEs in which co-created, intercultural narratives yield rich, relevant digital learning experiences.
