JTS Clinical Practice Guidelines, 2,260 total pages - current as of 19 September 2023: INTRODUCTION The SMOG continues to go through significant improvements with each release as a result of the collaboration of Emergency Medicine professionals, experienced Flight Medics, Aeromedical Physician Assistants, Critical Care Nurses, and Flight Surgeons. There has been close coordination in the development of these guidelines by the Joint Trauma System, and the Defense Committees on Trauma. Our shared goal is to ensure the highest quality en route care possible and to standardize care across all evacuation and emergency medical pre-hospital units. It is our vision that all of these enhancements and improvements will advance en route care across the services and the Department of Defense. Unit medical trainers and medical directors should evaluate Critical Care Flight Paramedics (CCFP) ability to follow and execute the medical instructions herein. These medical guidelines are intended to guide CCFPs and prehospital professionals in the response and management of emergencies and the care and treatment of patients in both garrison and combat theater environments. Unit medical providers are not expected to employ these guidelines blindly. Unit medical providers are expected to manipulate and adjust these guidelines to their unit's mission and medical air crew training / experience. Medical directors or designated supervising physicians should endorse these guidelines as a baseline, appropriately adjust components as needed, and responsibly manage individual unit medical missions within the scope of practice of their Critical Care Flight Paramedics, Enroute Critical Care Nurses, and advanced practice aeromedical providers. The medication section of this manual is provided for information purposes only. CCFPs may administer medications only as listed in the guidelines unless their medical director and/or supervising physician orders a deviation. Other medications may be added, so long as the unit supervising physician and/or medical director approves them. This manual also serves as a reference for physicians providing medical direction and clinical oversight to the CCFP. Treatment direction, which is more appropriate to the patient's condition than the guideline, should be provided by the physician as long as the CCFP scope of practice is not exceeded. Any medical guideline that is out of date or has been found to cause further harm will be updated or deleted immediately. The Medical Evacuation Concepts and Capabilities Division (MECCD) serves as the managing editor of the SMOG

and are responsible for content updates, managing the formal review process, and identifying review committee members for the annual review. The Standard Medical Operating Guidelines are intended to provide medical procedural guidance and is in compliment to other Department of Defense and Department of the Army policies, regulatory and doctrinal guidance. Nothing herein overrides or supersedes laws, rules, regulation or policies of the United States, DoD or DA.

ranger medic handbook 2022 pdf: Tactical Emergency Medical Support Rick Hammesfahr, Dave Collins, 2014-01-30 This manual is designed to serve as a starting point for the development and implementation of a Tactical Medical Emergency Support unit at the local level. It was originally developed for the Marietta, Georgia Special Weapons and Tactics Team and the Tactical Emergency Medical Support unit which was formed in 2005. As the TEMS unit evolved, this manual was developed. Due to demand and interest, it has been revised for more general application. The guidelines and philosophies in this manual have been developed after researching the policies of a number of different civilian departments, examining the policies and procedures currently in place for training military medical and nonmedical personnel, recognizing the limitations imposed by the Scope of Practice procedures in the State of Georgia, and recognizing the limitations of the guidelines imposed by the National Registry of Emergency Medical Technicians. The policies and procedures that follow must be individualized to allow for the local Medical Director's guidelines and to follow local Scope of Practice guidelines. The concept of Tactical Medical Emergency Protocols was developed by the Curriculum and Examination Committee of the United States Special Operations Command Surgeon General's Office for the military and has been adapted for civilian use; the Tactical Combat Casualty Care concepts were developed by the Committee on Tactical Combat Casualty Care and have been expanded upon for application by the Committee on Tactical Emergency Casualty Care; the Ranger Medic Handbook (2007) edition served as the starting point for developing the Triage recommendations, the flow charts, and the aid bag configurations; and the USAF PJ Handbook provided valuable information on environmental injuries. In addition to the Guidelines on Tactical Combat Casualty Care (TCCC), the Adult and Pediatric Guidelines on Tactical Emergency Casualty Care (TECC) are also included. Ideally, this manual will provide a starting point for further discussion and development of TEMS units, and will provide a basic framework from which these units' individual policies and procedures may be developed.
