cartridge headstamp guide pdf: A Multivariate Approach to Discriminating Between Batches of Cartridge Cases Using Design Changes in the Headstamp Christopher S. Price, 2011 A study was conducted to determine whether subtle changes could be discerned in the ICI headstamps impressed into .22 Long Rifle cartridges produced over time by the Colonial Ammunition Company, in order to define a specific period of manufacture. A large number of boxes of relevant ammunition were obtained and 117 of these were selected for sampling. An optimised set up was used to photograph the headstamps and the resultant images were processed for data collection. The data was collected in the form of Cartesian coordinates, with 22 coordinates collected from each headstamp. The coordinate data was used in a brief exploration of the data, after which the coordinates were used to calculate data transformations providing measurements of the various parameters of the headstamps. The various data transformations were assessed and a selection of these were used in the statistical analysis of the headstamps. The ability to predict the batch source of a headstamp was assessed using Linear Discriminate Analysis. The accuracy of the batch predictions were measured using a cross-validation method which showed the predictions for the

dry-primed cartridges were within five to six months (on average) of the true production date and the predictions for the wet-primed cartridges were within two months (on average) of the true production date. A blind study was conducted which showed that the classification model was very accurate. An exhibit from a historic murder in New Zealand was also examined to predict its production period. Its assignation is discussed in detail with reference to the relevance of this to the murder case--Abstract.

cartridge headstamp guide pdf: **Cartridge Manufacture** Douglas T. Hamilton, 2017-09-16 Excerpt from Cartridge Manufacture: A Treatise Covering the Manufacture of Rifle Cartridge Cases, Bullets, Powders, Primers and Cartridge Clips, and the Designing and Making of the Tools Used in Connection With the Production of Cartridge Cases and Bullets, Together With a Description of Th The processes used in the manufacture of cartridges are of interest not only to the makers of munitions of war, but to every mechanic who is engaged in those industries in which the drawing

and forming of metal in presses is of importance. The principles and operations pertaining to the production of metal cartridges are essentially the same as those used in hundreds of industries engaged in the manufacture of drawn objects for the most peaceful purposes; and while at the present time the interest in ammunition is paramount, the methods used for its manufacture differ in no essential from the methods employed in the ordinary metal working industries. The aim of this book is, therefore, not only to cover the various steps in the manufacture of one of the most important of munitions of war, but also to place on record approved methods in the drawing and forming of deep metal shells for any purpose. As the processes used in the manufacture of cartridges are probably more highly developed than those employed in most other fields of metal drawing, a book relating to these processes will no doubt be found of great value in many kindred fields.
