In 1922, under the title Judging Human Character, a supplementary volume was published, which surveyed some of the more recent developments, especially those concerned with the methods of appraising personal traits and qualities. Traditional methods were criticised and improvements suggested in the technique of applying and interpreting them. An endeavor was also made to communicate a general understanding of the principles underlying the methods of mental measurement. This revised edition

not only combines the materials of the two earlier volumes, but seeks also to incorporate, in survey fashion, the more recent developments in the field of vocational psychology.
