mheonline: Reading, Writing, and Digitizing Alice Horning, 2013-01-16 Reading, Writing, and Digitizing offers a new theoretical proposal concerning expert and novice readers and writers based on the psycholinguistics of literacy. This book has five specific goals. First, it presents a theory of meta-reading and writing that describes what literacy experts are able to do with written text. They do what the word "meta" describes: go before and after, into and around, beyond and beside written text to understand and create meaning. Second, the case studies presented reveal differences between literacy novices and experts in terms of their awarenesses about texts and their skills; these are clarified as the discussion unfolds. Third, the book provides an analysis of the processing mechanisms people use and the features that texts contain that make literacy possible. A fourth goal is to examine how experts understand and produce texts in both traditional and digital venues. Finally, the book ends with focused strategies for instruction that will be useful to any reader working with people engaged in literacy development. Readers of this book will be better equipped

to support the literacy development of others through their enhanced understanding of the psycholinguistics of reading and writing and of the differences between literacy novices and experts.

mheonline: Towards Zero Waste María-Laura Franco-García, Jorge Carlos Carpio-Aguilar, Hans Bressers, 2018-08-31

This book draws on insights that originated from the Circular Economy and Zero Waste initiatives. Together these approaches try to boost the shift from “waste” to “resources” management. The content of this book is partially organized from a stakeholder perspective, revealing the managerial implications for public and private actors. Next to public

policies, also illustrations come from the private sector. Petstar, Texperium and Walmart generously shared some of their best practices at in this regard. Cases from China, Indonesia, Mexico, the Netherlands and Romania are discussed in this book. In all of these different contexts they show ways to create collaborative schemes in order to “retain” the resources’ values as much as product quality and financial circumstances permit. The reader can thus take advantage of the pragmatic viewpoints that aim to inspire policy makers, researchers, students, organisations and communities to boost the needed changes towards a Zero Waste Economy.
