You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Intro to Science Have you ever wondered about human fossils, "cave men," skin color, "ape-men," or why missing links are still missing? Want to discover when T. Rex was small enough to fit in your hand? Or how old dinosaur fossils are-and how we know the age of these bones? Learn how the Bibles' world view (not evolution's) unites evidence from science and history into a solid creation foundation for understanding the origin, history, and destiny of life-including yours! In Building Blocks in Science, Gary Parker explores some of the most interesting areas of science: fossils, the errors of evolution, the evidences for creation, all about early man and human origins, dinosaurs, and even "races." Learn how scientists use evidence in the present, how historians use evidence of the past, and discover the biblical world view, not evolution, that puts the two together in a credible and scientifically-sound way! Semester 2: Life Science Study clear biological answers for how science and Scripture fit together to honor the Creator. Have you ever wondered about such captivating topics as genetics, the roll of natural selection, embryonic development, or DNA and the magnificent origins of life? Within Building Blocks in Life Science you will discover exceptional insights and clarity to patterns of order in living things, including the promise of healing and new birth in Christ. Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years. The evolutionary worldview can be found filtered through every topic at every age-level in our society. It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions. This dynamic education resource helps young people not only learn science from a biblical perspective, but also helps them know how to defend their faith in the process .

savvas realize biology answers: Let's Know Biology Mansoor Muallim, Chapter 1: The Wonder of Life Jammy: Welcome, Canny! Today, we embark on an exciting journey to explore the wonders of life, a topic that has fascinated scientists and enthusiasts alike for centuries. Life, in all its forms, is a magnificent tapestry of complexity and beauty. From the tiniest microorganism to the largest living creatures, the diversity and intricacy of life on Earth are truly awe-inspiring. Canny: Thank you, Jammy! I'm thrilled to dive into this captivating subject with you. So, where should we begin? Jammy: Let's start at the very basics. Life, as we know it, is defined by a set of characteristics that all living organisms share. These characteristics include organization, energy utilization, growth, reproduction, response to stimuli, and adaptation to the environment. When we observe these traits in a living being, we can be certain that life is present. Canny: That's fascinating! So, how did life originate on Earth? Jammy: The origin of life remains a fascinating and open question in the field of biology. While we don't have a definitive answer, one prevailing theory suggests that life emerged from simple organic molecules in a primordial soup billions of years ago. Over time, these molecules combined, evolved and eventually gave rise to the first living cells. Canny: Incredible! From those early beginnings, life has evolved into countless forms, each adapted to its unique environment. Jammy: Indeed! The process of evolution is a cornerstone of biology. It explains how

species change over time, leading to the diversity of life we see today. Natural selection, proposed by Charles Darwin, plays a crucial role in this process. It allows certain traits to be favored in a population, leading to the survival and reproduction of individuals with those advantageous traits. Canny: So, it's like a constant struggle for survival, and only the best-adapted organisms thrive and pass on their traits? Jammy: Exactly! Nature is a constant battlefield where organisms compete for limited resources, and those with advantageous traits are more likely to succeed in passing on their genes to the next generation. Canny: This interplay of life and environment is truly fascinating. But what about the building blocks of life? What are cells, and why are they so essential? Jammy: Cells are the fundamental units of life. They are like tiny factories, carrying out all the processes necessary for an organism to function. From metabolism to growth, from responding to stimuli to reproduction, cells are the workhorses of life. They come in various shapes and sizes, each with specific functions that contribute to the overall health and survival of an organism. Canny: It's remarkable how these tiny structures are the basis of all life. But what about us, humans? How do our bodies work? Jammy: Ah, the human body is a masterpiece of biological engineering! It's a complex network of interconnected systems that work in harmony to maintain homeostasis – a state of internal balance. Our circulatory system pumps blood, delivering nutrients and oxygen to every cell in the body, while the respiratory system facilitates the exchange of gases. The nervous system allows us to think, feel, and react to the world around us. Canny: It's like we are a universe within ourselves! But what happens when our bodies get sick? Jammy: Illnesses occur when the delicate balance within the body is disrupted. The immune system, our body's defense mechanism, plays a crucial role in identifying and neutralizing harmful invaders like bacteria and viruses. When the immune system is compromised, we become susceptible to diseases. Canny: I'm amazed by how everything is interconnected in the web of life. It makes me appreciate the complexity and beauty of living beings even more. Jammy: That's the wonder of life, Canny! Biology takes us on an incredible journey through the diverse and interconnected facets of living organisms. From the tiniest microorganisms to the grandest ecosystems, each chapter in this book will unravel new mysteries and insights about life on Earth. Canny: I can't wait to explore further! This conversation has already left me in awe of the natural world around us. Jammy: There's so much more to discover, Canny, and I'm thrilled to guide you through this fascinating journey. Let's dive into the next chapters to uncover the marvels of biology together!
