As Philip Alcabes persuasively argues in *Dread*, our anxieties about epidemics are created not so much by the germ or microbe in question - or the actual risks of contagion - but by the unknown, the undesirable, and the misunderstood. Alcabes examines epidemics through history to show how they reflect the particular social and cultural anxieties of their times. Traditionally, resources on terrorism and counterterrorism tend to focus on the social, behavioral, and legal aspects of the subject, with minimal emphasis on the scientific and technological aspects. Taking into account these practical considerations, the second edition of *Science and Technology of Terrorism and Counterterrorism* discusses the nature of terrorism and the materials used by terrorists. This volume begins by introducing the shift in analysis of terrorist attacks after September 11, 2001 and summarizes selected case studies. It discusses the origin and nature of terrorism and the factors involved in diplomacy. Covering a broad range of topics, the book examines: Aerosol dispersion of toxic materials Bioterrorism and the manufacture, detection, and delivery of biological agents Agricultural terrorism Nuclear terrorism and nuclear weapons systems, threats, and safeguards Chemical terrorism, including manufacture, detection, delivery, and decontamination Cyber-terrorism Personal protective equipment The role of government at federal, state, and local levels The role of international agencies and their resources, capabilities, and responsibilities The National Infrastructure Protection Plan As terrorist activities increase globally, it is critical that those charged with protecting the public understand the myriad of ways in which terrorists operate. While we cannot predict where, when, and how terrorists will strike, our vigilance in staying abreast of the terrorist threat is the only way to have a fighting chance against those who seek to destroy our world.

Smith, 2017-02-21 This book offers one of the most comprehensive studies of social pathology to date, following a cross-disciplinary and methodologically innovative approach. It is written for anyone concerned with understanding current social conditions, individual health, and how we might begin to collectively conceive of a more reconciled postcapitalist world. Drawing reference from the most up-to-date studies, Smith crosses disciplinary boundaries from cognitive science and anthropology to critical theory, systems theory and psychology. Opening with an empirical account of numerous interlinked carises from mental health to the physiological effects of environmental pollution, Smith argues that mainstream sociological theories of pathology are deeply inadequate. Smith introduces an alternative critical conception of pathology that drills to the core of how and why society is deeply ailing. The book concludes with a detailed account of why a progressive and critical vision of social change requires a "holistic view" of individual and societal transformation. Such a view is grounded in the awareness that a sustainable transition to postcapitalism is ultimately a many-sided (social, individual, and structural) healing process.

the plague by camus pdf: Literary Knowing and the Making of English Teachers Larissa McLean Davies, Brenton Doecke, Philip Mead, Wayne Sawyer, Lyn Yates, 2022-09-29 At a time when knowledge is being 're-valued' as central to curriculum concerns, subject English is being called to account. *Literary Knowing and the Making of English Teachers* puts long-standing debates about knowledge and knowing in English in dialogue with an investigation of how English teachers are made in the 21st century. This book explores, for the first time, the role of literature in shaping English teachers' professional knowledge and identities by examining the impacts, in particular, of their own school teaching in their 'making'. The voices of early career English teachers feature throughout the work, in a series of vignettes providing reflective accounts of their professional learning. The authors bring a range of disciplinary expertise and standpoints to explore the complexity of knowledge and knowing in English. They ask: How do English teachers negotiate competing curriculum demands? How do they understand literary knowledge in a neoliberal context? What is core English knowledge for students, and what role should literature play in the contemporary curriculum? Drawing on a major longitudinal research project, they bring to light what English teachers see as central to their work, the ways they connect teaching with their disciplinary training, and how their understandings of literary practice are contested and reimaged in the classroom. This innovative work is essential reading for scholars and postgraduate students in the fields of teacher education, English education, literary studies and curriculum studies.
