aurum science: *Science Fact and Science Fiction* Brian Stableford, 2006-09-06 Science fiction is a literary genre based on scientific speculation. Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings. *Science Fact and Science Fiction* examines in one volume how science has propelled science-fiction and, to a lesser extent, how science fiction has influenced the sciences. Although coverage will discuss the science behind the fiction from the Classical Age to the present, focus is naturally on the 19th century to the present, when the Industrial Revolution and spectacular progress in science and technology triggered an influx of science-fiction works speculating on the future. As scientific developments alter expectations for the future, the literature absorbs, uses, and adapts such contextual visions. The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction, but rather to study the ongoing flow and counterflow of influences, including how fictional representations of science affect how we view its practice and disciplines. Although the main focus is on literature, other forms of science fiction, including film and video games, are explored and, because science is an international matter, works from non-English speaking countries are discussed as needed.

aurum science: Captured by Aliens? Nigel Watson, 2020-06-09 New Hampshire couple Betty and Barney Hill provided Americans with what is essentially the original alien abduction story. Since their story became public in the early 1960s, many thousands of Americans have likewise come forward with similar stories of traumatic experiences. Sometimes the abductee has little conscious recollection of these events, but through nightmares, dreams, flashbacks and hypnosis they eventually learn more. Sometimes the participants are bewildered. To get a better understanding of the opposing viewpoints of skeptic and believer, the Betty and Barney Hill case is used to examine the wider context of such encounters, their historical origins, media influences and the latest extraterrestrial, psychological, paranormal, conspiracy and sociological theories that surround them.

aurum science: Aim for the Heart Howard Hughes, 2009-07-30 Clint Eastwood is one of the world's most popular action stars, who has matured into a fine American producer-director. Entertaining, illuminating and packed with information, up to and including *The Changeling*, this is the first book to cover his full life in the movies, from his beginnings in 1950s B-movies and in TV's *Rawhide* to *Gran Torino* showing how as both actor and filmmaker Eastwood aims for the heart of the drama, whatever the story. Howard Hughes follows Eastwood's craft through over 50 movies. He looks at his launch into superstardom in Sergio Leone's 1960s spaghetti westerns. Back in America, he built on his success as western hero with such films as *High Plains Drifter* and *The Outlaw Josey Wales*, winning an Oscar for *Unforgiven* in 1992. He blasted his way through the seventies and eighties as Inspector Harry Francis Callahan, the last hope for law enforcement in San Francisco. He also monkeyed around in two phenomenally popular films with Clyde the orang-utan, which brought tough-guy Eastwood to a whole new audience and made him the biggest box office star of his generation. *Aim for the Heart* also looks at Eastwood's more unusual roles, including *The Beguiled*, *The Bridges of Madison County* and *Million Dollar Baby*. Since 1970, he has enjoyed parallel success as director-producer of his own Malpaso Productions, with *Bird*, *Mystic River* and *Letters from Iwo Jima*, demonstrating formidable directing credentials. *Aim for the Heart* covers all Eastwood's movies of many genres in detail, and Eastwood's story is illustrated with film stills, glimpses behind the scenes, and rare poster advertising material. *Aim for the Heart* also includes the most comprehensive credits filmography has ever compiled on Eastwood's work, as star and director.

aurum science: Hollywood and the Baby Boom James Russell, Jim Whalley, 2017-12-28 Between 1946 and 1964 seventy-five million babies were born, dwarfing the generations that preceded and succeeded them. At each stage of its life-cycle, the baby boom's great size has dictated the terms of national policy and public debate. While aspects of this history are well-documented, the relationship between the baby boom and Hollywood has never been explored. And yet, for almost 40 years, baby boomers made up the majority of Hollywood's audience, and since the 1970s, boomers have dominated movie production. *Hollywood and the Baby Boom* weaves together interviews with leading filmmakers, archival research and the memories of hundreds of ordinary filmgoers to tell the full story of Hollywood's relationship with the boomers for the first time. The authors demonstrate the profound influence of the boomers on the ways that movies were made, seen and understood since the 1950s. The result is a compelling new account that draws upon an unprecedented range of sources, and offers new insights into the history of American movies.

aurum science: Nightmare Movies Kim Newman, 2011-04-18 Now over twenty years old, the original edition of *Nightmare Movies* has retained its place as a true classic of cult filmcriticism. In this new edition, Kim Newman brings his seminal work completely up to date, both reassessing his earlier evaluations and adding a second part that analyses the last two decades of horror films with all the wit, intelligence and insight for which he is known. Since the publication of the first edition, horror has been on a gradual upswing and has gained a new and stronger hold over the film industry. Newman negotiates his way through a vast back catalogue of horror and charts the on-screen

progress of our collective fears and bogeymen, from the low-budget slasher movies of the 1960s, through to the slick releases of the 2000s. *Nightmare Movies* is an invaluable companion that not only provides a newly updated history of the darker side of film but also acts as a truly entertaining guide with which to explore the less well-trodden paths of horror and rediscover the classics with a newly instructed eye.

aurum science: Alien Identities Deborah Cartmell, I. Q. Hunter, Heidi Kaye, Imelda Whelehan, 1999-03-20 This is a lively and stimulating look at representations, mutations and adaptations of 'the alien' in literature, film and television. Using notions of the alien and alienation in a broadly defined sense, the contributors cover early science fiction, from the gothic aliens of *Dracula* and H.G. Wells, to the classic fifties Cold War sci-fi movies, such as *War of the Worlds*, twentieth-century reworkings of various 'alien' metaphors, such as *The Fly* movies and the *Alien* series, and comic variations on the theme such as *Mars Attacks*. Moving beyond the conventional genre boundaries of the alien, particular essays look, too, at 'race' as an alien condition, and at the use of illness and disease as a metaphor for alienation in modern film and fiction.

aurum science: Dana Andrews James McKay, 2014-01-10 Dana Andrews, arguably the finest minimalist actor of his generation, as one critic commented, could convey more with one look than many actors could with a soliloquy. In a film career spanning nearly five decades, Andrews appeared in some of Hollywood's most prestigious productions, including *The Ox-Bow Incident* (1943) and *The Best Years of Our Lives* (1946). His unique screen presence was shown at its best in such film noir classics as *Laura* (1944) and *Where the Sidewalk Ends* (1950). Beginning with an absorbing biographical chapter, this critical survey of Dana Andrews' screen career features a complete filmography with synopses, reviews, behind-the-scenes anecdotes and insightful comments from Andrews and his coworkers. A chronological list of television, radio and theater credits is included.

aurum science: Screen Consciousness , 2006-01-01 This collection of essays is driven by the question of how we know what we know, and in particular how we can be certain about something even when we know it is an illusion. The contention of the book is that this age-old question has acquired a new urgency as certain trends in science, technology and ideas have taken the discussion of consciousness out of the philosophy department and deposited it in the world at large. As a consequence, a body of literature from many fields has produced its own sets of concerns and methods under the rubric of Consciousness Studies. Each contribution in this collection deals with issues and questions that lots of people have been thinking about for many years in many different contexts, things such as the nature of film, cinema, world, mind and so on. Those of us fascinated by these diverse yet related issues may have often felt we were working in a disciplinary no-man's-land. Now suddenly, it seems with Consciousness Studies we have a coherent intellectual home - albeit one that is self-consciously eclectic. The essays included in *Screen Consciousness: Cinema, Mind*

and World are from a range of disciplines — art, philosophy, film theory, anthropology and technology studies — each represented by significant international figures, and each concerned with how their field is being transformed by the new discipline of Consciousness Studies. Together they attempt to reconcile the oncoming rush of new data from science and technology about how we know what we know, with the insights gained from the long view of history, philosophy and art. Each of the contributions seeks to interpose Consciousness Studies between film and mind, where for cultural theorists psychoanalysis had traditionally stood. This is more than simply updating Film Studies or nodding in the direction of cognitive film theory. Film, with all its sentient, sensuous and social qualities, is a common reference point between all these forces, and Consciousness Studies provides the intellectual impetus for this book to revisit familiar problems with fresh insight.
