In a moment of struggle defined by the rollback of the social safety net, the criminalization of migration, and the right-wing clampdown on bodily autonomy, radical networks of care are fighting back. From volunteer rescue boats in the Mediterranean to underground labs preparing gender-affirming hormones, people are reclaiming the means to care for one another in defiance of a system that devalues and exploits the labor of care. Against atomized despair, *Pirate Care* shows that fighting back isn't only about legal and legislative changes but also about organizing, direct action, and disobedient care. frank hospital workshop: Mad Frank's Diary Frankie Fraser, James Morton, 2019-06-06 'They say I've killed 40 people and who am I to disagree? I've always liked even numbers.' Branded the

dentist for using pliers to extract the teeth of those who owed money to his boss Charlie Richardson, Frankie Fraser was labelled the most dangerous man in Britain by two Home Secretaries. He is famous for his crimes, many of which have entered gangster folklore. In these diaries, however, originally published when he was 78, Mad Frank delved into areas he had never chosen, or dared, to talk about before. His day-by-day entries record unsolved murders, shoot-outs, crooked coppers, bribery, extortion, wrongful convictions, and even sex in prison. And by contrast, he also opens up with personal memories of growing up in poverty, in London's East End, and the reality of having to steal food to feed the family. Frankie Fraser died in 2014, and this rare True Crime classic is first-hand history at its most compelling.

frank hospital workshop: Moral Complexities in Turn of the Millennium British Literature Mara E. Reisman, 2022-11-08 Moral Complexities in Turn of the Millennium British Literature offers a critical analysis of moral complexity and social responsibility in works by Kazuo Ishiguro, Patrick McGrath, Graham Swift, Andrea Levy, and Jeanette Winterson. Mara Reisman argues that through their writing, these authors reveal and upset literary, cultural, and political fictions and encourage readers to think carefully about language, power, community, and social justice. The book examines moral issues in two different ways: how books by these authors address morally complex social, political, and cultural issues and how their books serve a moral function by challenging readers to be socially engaged. Reisman provides an in-depth analysis of *The Remains of the Day*, *Asylum*, *The Light of Day*, *Small Island*, and *The Daylight Gate* and uses these books to discuss twentieth- and twenty-first-century British politics and culture. These books address a wide variety of issues often associated with moral judgments: war, racism, adultery, maternal neglect, murder, professional misconduct, witchcraft, and religion. Despite this diversity and settings that range from the seventeenth century to the late twentieth century, these books include similar arguments about how empathy, personal responsibility, and civic engagement can create more productive social relations and a less divided world.

frank hospital workshop: Rozelle Hospital Edward H. Moxon, 2024-11-29 In the 1960s, psychiatry was entering a new phase of its development. However, many people were uncomfortable with these changes and fought against what they saw as apostasy, dangerous, and unprofessional decisions by the bureaucracy. The role of Nurses before 1960 was task-oriented, to control behaviour, give somatic treatments when ordered, and provide the daily personal needs of their patients, a custodial model. Since 1960, the nursing profession, ancillary staff and Doctors have been forced to reassess their traditional involvement and develop new skills. All previous somatic treatments were abandoned or rarely used in mainstream psychiatry. The only tools left for nurses were consciously using self in a therapeutic relationship, communicating, sharing, developing empathy and compassion, and helping the patient gain insight, self-awareness and problem-solving

skills. No longer were the staff seen as the 'boss', demanding obedience. Nurses had to learn how to work in alternative environments, halfway houses, day clinics, community clinics, night hospitals, acute units, work with mixed sexes, and learn new skills through family therapy, TA, cognitive behaviour modification, encounter groups, gestalt therapy, reality therapy and a therapeutic community and adapt to different age and cultural groups. Management of wards and staff presented a challenge to administrators. In-patients attained much more freedom and self-government with these developments. The hierarchy was flatter, industrial democracy was expected, and workers had to cope with changing organisational structures. Government decision-making was a constant source of conflict. A new approach to management emerged, trust replaced control, and self-government replaced regimentation. Where were all these developments leading? What of the future? Volume Two explores the sequel and exposes the intrigues, promises, hypocrisy, lies, neglect, social engineering, and the fate of long-term residents and people with acute psychiatric episodes.

frank hospital workshop: Global Perspectives on Probing Narratives in Healthcare

Casal, Teresa, Cabral, Maria de Jesus, 2023-06-01 There is often a communication disconnect between medical caregivers, including doctors, nurses, therapists, and other assistive medical personnel, and the patient. While medical staff usually understand a patient's symptoms, causes, and treatments, communicating this understanding to a patient using industry terminologies can lead to confusion and misunderstanding, and similarly, patients may lack the vocabulary to effectively communicate their experiences back to their caregivers. A new approach to communication must be bridged between these groups by individuals who have experience on both sides of the conversation. Previous studies of doctors who end up in the role of the patient reveal how these individuals have a dual perspective on illness, combining their medical knowledge with their own personal medical experiences. Narratives, including autobiographical accounts and fictional stories, can help bridge the gap between experiential and academic knowledge of illness by expanding one's limited perspective and accessing others' points of view. Autobiographical and fictional narratives can both play a role in developing a more comprehensive understanding of illness beyond simply treating the disease. It is necessary to further examine the ethical and methodological underpinnings of narrative-based interventions in the education of healthcare professionals, practitioners, and patients. *Global Perspectives on Probing Narratives in Healthcare* offers a multidisciplinary examination of theoretical and methodological uses of narratives in healthcare by bringing together medical aspects of healthcare and the study of arts and humanities. This illustrates specific applications of narratives in healthcare settings, including improvement of clinical skills, performance of the caring role, and self-efficacy for building a true partnership in the patient's health journey through varied approaches, up-to-date tools, and resources that can be transferred and adapted to specific educational and healthcare contexts. This diverse collection of expert knowledge and experience is led by editors with over 20 years of teaching experience: Dr. Teresa Casal of the University of Lisbon, Portugal and Dr. Maria de Jesus Cabral of the University of Minho, Portugal. Expertise featured in this book includes contributions from some of the most prestigious academic institutions, including Columbia University in the United States, King's College in the United Kingdom, University of Padua in Italy, and more. It is an essential resource for healthcare and social science researchers, academics, advanced healthcare students, health training and education departments, healthcare practitioners and patients' associations, and policymakers in healthcare who are looking to broaden their scope of understanding of the patient experience.
