kaiser permanente doctors note: Medical Leadership Peter Spurgeon, John Clark, Chris Ham, 2017-11-22 'Successful medical leaders are usually, but not always, experienced and credible clinicians with good people skills, who look beyond the boundaries of their own specialty or institution, who are positive and perseverant and who are prepared to take reasonable risks to achieve their goals. Most importantly they know how to engage their colleagues and effect change. They understand the principles of organisational performance and the balance between professional autonomy and corporate behaviour - ' Sir Bruce Keogh, in the Foreword This book is a

comprehensive account of the key aspects of medical leadership. Easy to read and highly accessible, it explores how the medical profession has evolved in tandem with administrative and structural aspects of the NHS: previously reluctant leaders, doctors are increasingly positive about adopting management and organisational responsibility. Assuming leadership roles at all stages of their training and career is a progressively vital component of the definition of a 'good doctor'. Completely up-to-date, this book features exciting and critical developments such as the embedding of the Medical Leadership Competency Framework as a statutory element of the training and development of all doctors, and the establishment of a new Faculty of Medical Leadership and Management. It is highly recommended, inspiring reading for all medical professionals taking on formal leadership roles. Junior doctors, too, will find much of interest.

kaiser permanente doctors note: Fads, Fallacies And Foolishness In Medical Care Management And Policy Theodore R Marmor, 2007-03-28 No one misses the onslaught of claims about reforming modern medical care. How doctors should be paid, how hospitals should be paid or governed, how much patients should pay when sick in co-payments, how the quality of care could be improved, and how governments and other buyers could better control the costs of care — all find expression in the explosion of medical care conference proceedings, op-eds, news bulletins, journal articles, and books. This collection of articles takes up a key set of what the author regards as particularly misleading fads and fashions — developments that produce a startling degree of foolishness in contemporary discussions of how to organize, deliver, finance, pay for and regulate medical care services in modern industrial democracies. The policy fads addressed include the celebration of explicit rationing as a major cost control instrument, the belief in a “basic package” of health insurance benefits to constrain costs, the faith that contemporary cross-national research can deliver a large number of transferable models, and the notion that broadening the definition of what is meant by health will constitute some sort of useful advance in practice.

kaiser permanente doctors note: The Fragmentation of U.S. Health Care Einer Elhauge, 2010-03-22 Why is our health care system so fragmented in the care it gives patients? Why is there little coordination amongst the many doctors who treat individual patients, who often even lack access to a common set of medical records? Why is fragmentation a problem even within a single hospital, where errors or miscommunications often seem to result from poor coordination amongst the myriad of professionals treating any one individual patient? Why is health care fragmented both over time, so that too little is spent on preventive care, and across patients, so that resources are often misallocated to the patients who need it least? The Fragmentation of U.S. Health Care: Causes and Solutions approaches these broad questions with a highly interdisciplinary approach. The articles included in the work address legal and regulatory issues, including laws that mandate separate payments for each provider, restrict hospitals or others from controlling or rewarding the set of providers treating a patient to assure coordinated care, and provide affirmative disincentives for coordinating care by paying more for uncoordinated care that requires more services. Business reasons for the current form of hospital organization are considered, and efficiency and design are examined and compared to other industries. The economics of current hospital organization are also taken into account. The authors examine and propose various reforms that make our health care system less fragmented, more efficient, and more medically effective.

kaiser permanente doctors note: Time to Heal Kenneth M. Ludmerer M.D., 1999-11-11 Already the recipient of extraordinary critical acclaim, this magisterial book provides a landmark account of American medical education in the twentieth century, concluding with a call for the reformation of a system currently handicapped by managed care and by narrow, self-centered professional interests. Kenneth M. Ludmerer describes the evolution of American medical education from 1910, when a muck-raking report on medical diploma mills spurred the reform and expansion of medical schools, to the current era of managed care, when commercial interests once more have come to the fore, compromising the training of the nation's future doctors. Ludmerer portrays the experience of learning medicine from the perspective of students, house officers, faculty, administrators, and patients, and he traces the immense impact on academic medical centers of outside factors such as World War II, the National Institutes of Health, private medical insurance, and Medicare and Medicaid. Most notably, the book explores the very real threats to medical education in the current environment of managed care, viewing these developments not as a catastrophe but as a challenge to make many long overdue changes in medical education and medical practice. Panoramic in scope, meticulously researched, brilliantly argued, and engagingly written, Time to Heal is both a stunning work of scholarship and a courageous critique of modern medical education. The definitive book on the subject, it provides an indispensable framework for making informed choices about the future of medical education and health care in America.
