sabre red workspace: [Mastering the Travel Intermediaries](#) Ben Vinod, 2024-06-25 This book chronicles the role of travel intermediaries: global distribution systems (GDS), travel management companies (TMC), and online travel agencies (OTA) in the distribution of travel products. The book covers the historical development of these intermediaries and explores their current state and future prospects. Almost six decades after the introduction of computerized reservations systems and four decades after the introduction of Global Distribution Systems that allowed travel agents to make automated airline bookings, the distribution of air products is amid a major transition. A fundamental change is pricing power, which shifts from the GDSs to the airlines for the indirect channel. These changes are driven by advancements in technology, market economics, and airline cost controls, leading to the emergence of new revenue models that will permanently alter the landscape of air distribution. As a result, travel intermediaries are experiencing the effects of these turbulent times and must adopt innovative approaches and initiatives to adapt and transform their business models rather than maintaining the status quo. In addition to the ongoing transformation, over the next decade, the advancements in emerging technologies like blockchain and decentralized digital identity will further revolutionize the distribution landscape across all sectors of the travel industry.

Those who stand at the top pull the strings in whatever manner they desire, unopposed by their subordinates, and unchallenged by ethics. But some people are difficult to tame, as not all humans are created equal within the confines of Menilax. A rare gift has spread throughout the Broken Sector, allowing the less fortunate to control parts of existence that normal people could only dream of. But they are tired, poor and homeless, and have been abandoned by the rest of the city due to their volatility. Grey is a man looking to strengthen his constituents and rebuild the Sector, working as much as he can before his time comes to an end. With a track record of blood and shadow, he's hoping that with enough good deeds he can redeem himself. To what lengths he will go to remains to be seen, but is it remotely possible for good works to cancel out a history of dark deeds? Where does one draw the line, for who can be forgiven, and who must be damned for their sins? While Grey grew up fending for himself in a secluded, apathetic environment, Janus enrolled with STARCOV, a covert division of the military, specialising in espionage, tactics and foreign surveillance. Her world is torn asunder when her little brother is abducted, leaving her mind to unravel at a frightening pace. Not only must she deal with Oscar's disappearance, but Janus is left with years of operational conditioning, skills not applicable to life outside of the unit. Janus plans to take matters into her own hands to take back control, to see Oscar returned home in one piece. Will her trauma consume her from the inside? Or will she beat the odds and succeed despite her shortcomings?
