the five minute journal pdf: *Linguistic Copenhagen Interpretation of Quantum Theory* Shiro ISHIKAWA, 2023-11-15 Various interpretations of quantum mechanics have been proposed such as the Copenhagen interpretation and the many-worlds interpretation. The linguistic Copenhagen interpretation in this book is a kind of the Copenhagen interpretation derived from von Neumann's formulation of quantum mechanics on Hilbert spaces. Von Neumann had the widest coverage of any mathematician of his time, integrating pure and applied sciences and making major contributions to many fields, including mathematics, physics, economics, computing, and statistics. He was not a genius who specialised only in mathematics and physics, but an all-round genius. From this fact we are tempted to expect the following. (#1) the quantum theory generated from the linguistic Copenhagen interpretation called Quantum Language (QL) is a very large theory that includes not only quantum mechanics of physics but also classical statistics. More generally we may say (#2) QL is the scientific realisation of the dualistic idealism of philosophy. In this book I devote myself to proving (#1). QL consists of two axioms (measurement and causality) and the linguistic Copenhagen interpretation. I first prove von Neumann-Lüders projection postulate in QL. This is a solution in QL, and it is undecided whether it is a physical solution, but the theorem allows QL to be discussed without being interfered by various paradoxes (e.g., Schrödinger's cat, etc.). Also, recall that there are no axioms in statistics. This means that we do not yet have 'theoretical statistics'. However, if we consider that QL for classical systems = theoretical statistics, we can then introduce an elegant understanding into statistics. In most books of statistics, Fisher's maximum likelihood method is not given a due treatment. From the quantum linguistic point of view, the most basic arguments are Fisher's maximum likelihood method and regression analysis. They are strongly linked to the measurement and causality axioms, respectively. As modern statistics continues to develop rapidly in the direction of application now, it is essential to take an overview of statistics as a whole under an umbrella of theoretical statistics. For (#2), refer to my previous book (i.e., *History of Western Philosophy from a perspective of quantum theory- Introduction to theory of everyday science*- Shiho-Shuppan Publisher, 425 p. (2023)). Throughout this book as well as the one above, I assert that von Neumann's formulation of quantum mechanics should not be confined in physics, but should be regarded as a fundamental theory of science.

the five minute journal pdf: History of Western Philosophy from a Perspective of Quantum

Theory Shiro ISHIKAWA, 2023-05-22 Recently I proposed Quantum Language (QL) as a language of (dualistic and idealistic) science, which is also characterized as a linguistic turn of quantum mechanics. QL has two subclasses, non-commutative QL and commutative QL. They are applicable to quantum systems and to classical systems, respectively. QL is composed of Axiom 1 (measurement), Axiom 2 (causality), and the linguistic Copenhagen interpretation. This theory has a stronger descriptive power than (quantum) mechanics and statistics. Axioms 1 and 2 are usual since they are operator algebraic generalizations of quantum mechanics. On the other hand, the part of "linguistic Copenhagen interpretation" is not usual. This is defined by "a rule for drawing a line between science and pseudoscience". For example, the Popper's falsifiability is one of the rules of the linguistic Copenhagen interpretation. Other examples are: 1) "There exists only 'one', and not 'many'." (due to Parmenides) -> "Measurement can only be done once", "A state does not move." 2) "There is no motion." (due to Parmenides) -> "A state does not move." 3) "There is only the present." (due to Augustinus) -> "There is no tense." 4) "To be is to be perceived." (due to Berkely) -> "Nothing can be said without measurement." ... It is surprising that philosophers who did not know quantum mechanics approached the Copenhagen interpretation as described above. Thus, I consider that the Copenhagen Interpretation is not attached to quantum mechanics, but to quantum language. I will show that QL is a scientific perfection of dualistic idealism in Western philosophy. In fact, the following unsolved problems in Western philosophy can be solved only by QL, not by statistics. * Zeno paradoxes, the problem of universals, Descartes problem (=mind-body problem + subjectivity problem), the Leibniz-Clarke space-time correspondence, Hume's problem of induction, the Grue paradox, From Kantian synthesis to QL-synthesis, the brain in a vat, Hempel's flagpole problem, the black raven problem, Wittgenstein's problem "Why does logic work in our world?", etc. The most fundamental theories in modern science are commonly said to be the three: theory of relativity, quantum mechanics, and statistics. However, as this book will show, commutative QL is more powerful and beautiful than statistics. Therefore, I would replace the above three by "theory of relativity, quantum mechanics, and commutative QL".

the five minute journal pdf: *Strengthening the Military Family Readiness System for a*

Changing American Society National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on the Well-Being of Military Families, 2019-10-25 The U.S. military has been continuously engaged in foreign conflicts for over two decades. The strains that these deployments, the associated increases in operational tempo, and the general challenges of military life affect not only service members but also the people who depend on them and who support them as they support the nation and their families. Family members provide support to service members while they serve or when they have difficulties; family problems can interfere with the ability of service members to deploy or

remain in theater; and family members are central influences on whether members continue to serve. In addition, rising family diversity and complexity will likely increase the difficulty of creating military policies, programs and practices that adequately support families in the performance of military duties. Strengthening the Military Family Readiness System for a Changing American Society examines the challenges and opportunities facing military families and what is known about effective strategies for supporting and protecting military children and families, as well as lessons to be learned from these experiences. This report offers recommendations regarding what is needed to strengthen the support system for military families.

the five minute journal pdf: Offender Rehabilitation Programmes Laura M. Small, Paul M.W. Hackett, 2023-04-28 This book shows how prison officers may be able to significantly influence extra-programmatic conditions, to enhance rehabilitation outcomes and contribute to reducing reoffending. It does so through a detailed review of the literature relating to prison-based rehabilitation programmes, examining factors influencing their outcomes and the effects of the prison officer role. Firstly the book explores current understandings about the role of the prison and effective offender rehabilitation programmes. It then describes the processes of the integrative review of how prison officers can support rehabilitation programmes in prisons. Review findings suggest three main routes by which prison officers can contribute to enhancing rehabilitation outcomes: influencing prison social environments, enhancing prisoner treatment readiness and programme engagement and identifying and supporting prisoners' wider needs. This book also explores avenues for further research in this area using a declarative sentence mapping approach. Bridging two previously distinct areas of research - prison officers and their role; and prison rehabilitation interventions - this book offers new understanding in the real-world context of prisons and their staff as to how we can enhance rehabilitation outcomes. It will be of great interest to academics in penology, forensic psychology, probation, and offender rehabilitation fields. The book is also valuable to postgraduate students and professionals working on prison policy.
