2010e application: The Law and Politics of International Human Rights Courts Alec Stone Sweet, Wayne Sandholtz, 2024-09-24 Combining perspectives from law and the social sciences, this book provides an account of the origins and evolution of six regional human rights courts. In each of these cases, judges sought to overcome political forces and legal obstacles that threatened to render the regime stillborn. Alec Stone Sweet and Wayne Sandholtz focus on the struggle to raise standards of rights protection within multi-level transnational systems of justice. A transnational system of justice is comprised of three components: a charter of rights; a court tasked with enforcing the charter; and the right of individuals to petition the court with a claim that their rights have been violated. The book analyzes the law and politics of such systems in diverse areas, including torture, inhuman treatment, non-discrimination, due process and access to justice, free expression, privacy and family, and other freedoms. In some cases, state officials have at times strongly supported enhancing the effectiveness of rights protections. In others, the activities of the courts have generated significant political backlash, leading state officials to act to curb the court's authority, or to exit the regime altogether. The book describes and evaluates these attempts, the results of which have been mixed, with most court-curbing exercises failing.

2010e application: Human Dignity and the Future of Global Institutions Mark P. Lagon, Anthony Clark Arend, 2014-10-15 What does human dignity mean and what role should it play in guiding the mission of international institutions? In recent decades, global institutions have proliferated—from intergovernmental organizations to hybrid partnerships. The specific missions of these institutions are varied, but is there a common animating principle to inform their goals? Presented as an integrated, thematic analysis that transcends individual contributions, *Human Dignity and the Future of Global Institutions* argues that the concept of human dignity can serve as this principle. Human dignity consists of the agency of individuals to apply their gifts to thrive, and requires social recognition of each person's inherent value and claim to equal access to opportunity. Contributors examine how traditional and emerging institutions are already advancing human dignity, and then identify strategies to make human dignity more central to the work of global institutions. They explore traditional state-created entities, as well as emergent, hybrid institutions and faith-based organizations. Concluding with a final section that lays out a path for a cross-cultural dialogue on human dignity, the book offers a framework to successfully achieve the transformation of global politics into service of the individual.
