emergency room discharge papers: *Fraught with Pain* Pereira, Isabel, Ramírez, Lucía, 2019-09-04 This books seeks to facilitate linkages between discussions on the right to health and discussions on drug policy reform. The populations we talk about here are the noes most in need of a change whereby drug culture measures cease to stand in the way of a life free from pain. The suffering and pain experienced by people with terminal illnesses and people with heroin use disorder can be alleviated through opioids. At the same time, the enforcement of international drug control treaties means that these medicines are subjected to strict controls that create excessive red tape and contribute to generalized fear among patients and health professionals concerning these medicines' use. Although many opioids are included in the World Health Organization's list of essential medicines, the fact that they are controlled substances means that in practice, the right to health of these two populations often is violated. *Fraught with Pain* offers a diagnosis of five Colombian cities with regard to the barriers that both populations—patients at the end of life and individuals with heroin use disorder—face when trying to access opioids. The hurdles they encounter can be grouped into four categories: 1. Structural failings of the Colombian health system 2. A lack of institutional capacity to maintain sufficient opioid stocks in small and medium cities 3. A lack of specialized training among health professionals in small and medium cities on the issues of palliative care and psychoactive substance use disorders 4. Stigma surrounding opioids and the people who use them Analyzing the enjoyment of the right to health among these two groups of people would seem ill advised, for what could they and the health care they receive possibly have in common? However, this book argues that someone facing the end of life and someone with a heroin use disorder actually face similar challenges: they are both in need of the same controlled substances; they both require interdisciplinary treatment that extends beyond opioids; they both seek health services during moments of extreme vulnerability; and they are both often treated negligently by health systems that are ill equipped to handle death and drug dependence. *Fraught with Pain* seeks

to facilitate linkages between discussions on the right to health and discussions on drug policy reform. The populations we talk about here are the ones most in need of a change whereby drug culture measures cease to stand in the way of a life free from pain. In the increasingly popular medical-memoir genre, this one stands out." —Booklist Told in fast-paced, stand-alone chapters that recall unforgettable medical cases, Patient Care offers the fascination of medical mysteries, wrapped in the drama of living and dying. A snap judgment about a child nearly kills him, and a priest who may be having a heart attack refuses treatment. An asthmatic man develops air bubbles in his shoulders, and a pharmacist is haunted by a decision he makes. But the book goes beyond these stories. Each chapter explores ethical questions that remind us of the full humanity of patients, nurses, coroners, pharmacists, and, of course, doctors. How do they care for strangers in their moments of crisis? How

do they care for themselves? Dr. Seward rejects doctor-as-God narratives to write frankly about moments of failure, and champions the role of his colleagues in health care. And, for all the moral dilemmas here, there is plenty of wit and humor, too. (See the patient who punches our doctor.) Readers of Patient Care will find themselves thinking along with Dr. Seward: "What is the right thing to do? What would I do?"
