june 2022 living environment regents: Foundations of American Education Christian P. Wilkens, 2025-02-01 Answers all the questions that students preparing for a career in education ask.

Foundations of American Education asks many of the questions new teachers face: How should I handle classroom management? How will I know if students are learning what they should? What should I do in class my first year? How can I make things better for students? This book addresses major topics covered by introductory-level education classes, such as the history of US public schools, curriculum and assessment, classroom management, school governance, law, and more. Each chapter includes stories and examples from real teachers and schools and closes with a major US court case about public education. A major goal for the volume is to develop a sense for what US public school teachers do now and how we might be able to do better in the years ahead.

june 2022 living environment regents: The Failure of the Neo-Liberal Approach to Poverty Brian Caterino, 2022-09-06 This book examines the foundation and progress of the Rochester Monroe Anti-Poverty Initiative (RMAPI). Poverty has once again become a major issue in American cities, and nowhere more so than Rochester, which has one of the highest rates of poverty in the nation. RMAPI was established to reduce poverty, yet in the five years since its formation the poverty rate is essentially unchanged. Analyzing the reasons behind its failure, this book argues that the very nature of the organizational framework is part of the problem, and that RMAPI's project is caught up with contradictory imperatives of neo-liberal welfare reforms. More than just a study of local interest, the book uses Rochester as a case study to illuminate the limits of the neo-liberal approach to poverty. It will appeal to all those interested in political science, urban politics, community studies, welfare policy and public administration.

june 2022 living environment regents: Toxic Sexual Politics Melina Packer, 2025-01-28 A bold exposé of how the very foundation of toxicology has been contaminated by sexist and racist ideologies The first critical understanding of the field of toxicology from a feminist and antiracist perspective, Toxic Sexual Politics asserts that the science of toxicants must be held accountable for the uneven distribution of toxic pollution along racial and sexual lines. Drawing upon in-depth interviews and extensive ethnographic and archival research, including participant observations in toxicology classrooms, conferences, and laboratories, Melina Packer urges environmental health advocates to place toxicant science within its masculinist, militarist, and eugenicist history. Toxic Sexual Politics shows how the founding fathers of U.S. toxicology were ideologically aligned with the chemical industry, inventing a science that could "make chemicals safe," as opposed to one that could adequately protect planetary health from toxicants' hazards. While many toxicologists today are critical of the chemical industry, they continue to rely on the highly limited tools of toxicology as accurate measures of toxicity, as do government regulators, the courts, and environmental advocates. Unlike most critiques of the chemical industry and narratives of environmental health movements, Toxic Sexual Politics refuses to take the science at face value. By focusing on the sexist, racist, and ableist biases reinforced by toxicology, Packer powerfully argues that this scientific discipline reproduces the very same white supremacist and heterosexist logics that generated environmental injustices in the first place. The field of toxicology can explicitly confront chemical corporate power by building from queer, feminist, anti-ableist, and antiracist movements for environmental and reproductive justice.
