kinetic moped: Product Strategy and Corporate Success C B Rao, 2019-10-17 Product strategy is the key driver of business strategy and corporate success. This book brings out several important aspects of product strategy, drawing upon examples from the Indian automobile industry, which is verily the bellwether of the Indian economy. The automobile industry is not only a strategic industry economically but also an instructive industry intellectually. The industry is the cradle of modern management and is a synthesis of various functional strategies. The growth of the automobile industry or, for that matter, any consumer-facing industry lies in its ability to maintain a continuous pipeline of new and innovative products, substantive in functionality and stylistic in appearance. The automobile industry provides the perfect backdrop for discussing products as the core of the corporate business strategy. The global automobile industry, including the Indian automobile industry, is at an inflection point with portends of an unprecedented transformation. The drivers of this transformation are already seen in terms of connected vehicles, autonomous mobility, electric vehicles and digital technologies. The book, through its eighty chapters, demonstrates the synergistic interplay between technology and business, strategy and execution, innovation and inventiveness, enterprise and regulation, indigenization and globalization, structure and process, resourcing and spend, and leadership and management. This interplay would determine India's ability to become a major player in this transformation. This book will be of interest to industry professionals, policy makers, the academic community and the general public.

kinetic moped: Psychedelic White Arun Saldanha, Psychedelic White is one of the most innovative, refreshingly different analyses of race I have read in the last decade. —Elizabeth Grosz, author of *The Nick of Time: Politics, Evolution and the Untimely* The village of Anjuna, located in the

coastal Indian state of Goa, has been one of the premier destinations on the global rave scene for nearly two decades. The birthplace of Goa trance, the most psychedelic variety of electronic dance music, Anjuna first attracted adventurous Westerners in the 1970s who were drawn there by its tropical beaches, tolerant locals, and readily available drugs. Today, rave tourists travel to Goa to take part in round-the-clock dance parties and lose themselves in the crowds, the music, and the drugs. But do they really escape where they come from and who they are? A rich and theoretically sophisticated ethnography, *Psychedelic White* explains how race plays out in Goa's white counterculture and grapples with how to make sense of racism when it is not supposed to be there. Goa is a site of particularly revealing forms of interracial collision, and contrary to author Arun Saldanha's expectations that the nature of rave would create an inclusive atmosphere, he repeatedly witnessed stark segregation between white and Indian tourists. He came to understand race in its creative dimension as a shifting and fuzzy assemblage of practices, environments, sounds, and substances—dance skills, sunlight, conversation, cannabis, and tea. In doing so, his work shows how the rave scene in Goa harbors conflicting tendencies regarding race. The complicated intersection of cultures and phenotypes, Saldanha asserts, helps to consolidate whiteness. Race emerges not through rigid boundaries but rather through what he terms viscosity, the degree to which bodies gather together for pleasure and self-transformation. Challenging the prevailing conception of racial difference as a purely social construction and offering building on the works of Gilles Deleuze and Félix Guattari, *Psychedelic White* presents nothing less than a new materialist approach to race. Arun Saldanha is assistant professor of geography at the University of Minnesota.
