sandra orlow: Informed Consent and Health Literacy Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2015-03-04 Informed consent - the process of communication between a patient or research subject and a physician or researcher that results in the explicit agreement to undergo a specific medical intervention - is an ethical concept based on the principle that all patients and research subjects should understand and agree to the potential consequences of the clinical care they receive. Regulations that govern the attainment of informed consent for treatment and research are crucial to ensuring that medical care and research are conducted in an ethical manner and with the utmost respect for individual

preferences and dignity. These regulations, however, often require - or are perceived to require - that informed consent documents and related materials contain language that is beyond the comprehension level of most patients and study participants. To explore what actions can be taken to help close the gap between what is required in the informed consent process and communicating it in a health-literate and meaningful manner to individuals, the Institute of Medicine's Roundtable on Health Literacy convened a one-day public workshop featuring presentations and discussions that examine the implications of health literacy for informed consent for both research involving human subjects and treatment of patients. Topics covered in this workshop included an overview of the ethical imperative to gain informed consent from patients and research participants, a review of the current state and best practices for informed consent in research and treatment, the connection between poor informed consent processes and minority underrepresentation in research, new approaches to informed consent that reflect principles of health literacy, and the future of informed consent in the treatment and research settings. Informed Consent and Health Literacy is the summary of the presentations and discussion of the workshop.

sandra orlow: **Botanical Revolutions** Giovanni Aloï, 2025-03-18 This groundbreaking volume unearths the representation of plants and their vital impact on art, thereby advocating for the botanical world's legitimate place in art history. Desired for their aesthetic beauty, sought after for their medicinal properties, harvested for their scents and flavors, or grown as essential material resources, plants are indissolubly entwined with our existence. In art it is no different: plants have played a critical role. Yet despite their significant material and conceptual contributions, plants have been sidelined in the commentary of art historians and critics. *Botanical Revolutions* presents a global history of plants in art, focusing on the crucial moments that signaled the formation of new movements and styles, as well as the creation of media that could not have occurred without the involvement of and interaction with the vegetal world. In this fascinating and beautifully illustrated book, author Giovanni Aloï delves deeply into the history and representation of plants in art, advocates for a change in our relationship with the botanical world, and presents an alternative history of art that foregrounds the truly indispensable contributions of plants.

sandra orlow: *Rethinking Culture in Health Communication* Elaine Hsieh, Eric M. Kramer, 2021-04-08 *Rethinking Culture in Health Communication* An interdisciplinary overview of health communication using a cultural lens—uniquely focused on social interactions in health contexts

Patients, health professionals, and policymakers embody cultural constructs that impact healthcare processes. *Rethinking Culture in Health Communication* explores the ways in which culture influences healthcare, introducing new approaches to understanding social relationships and health policies as a dynamic process involving cultural values, expectations, motivations, and behavioral patterns. This innovative textbook integrates theories and practices in health communication, public health, and medicine to help students relate fundamental concepts to their personal experiences and develop an awareness of how all individuals and groups are shaped by culture. The authors present a foundational framework explaining how cultures can be understood from four perspectives—Magic Consciousness, Mythic Connection, Perspectival Thinking, and Integral Fusion—to examine existing theories, social norms, and clinical practices in health-related contexts. Detailed yet accessible chapters discuss culture and health behaviors, interpersonal communication, minority health and healthcare delivery, cultural consciousness, social interactions, sociopolitical structure, and more. The text features examples of how culture can create challenges in access, process, and outcomes of healthcare services and includes scenarios in which individuals and institutions hold different or incompatible ethical views. The text also illustrates how cultural perspectives can shape the theoretical concepts emerged in caregiver-patient communication, provider-patient interactions, social policies, public health interventions, and other real-life settings. Written by two leading health communication scholars, this textbook: Highlights the sociocultural, interprofessional, clinical, and ethical aspects of health communication Explores the intersections of social relationships, cultural tendencies, and health theories and behaviors Examines the various forms, functions, and meanings of health, illness, and healthcare in a range of cultural contexts Discusses how cultural elements in social interactions are essential to successful health interventions Includes foundational overviews of health communication and of culture in health-related fields Discusses culture in health administration, moral values in social policies, and ethics in medical development Incorporates various aspects and impacts of the COVID-19 pandemic as a cultural phenomenon through the lens of health communication *Rethinking Culture in Health Communication* is an ideal textbook for courses in health communication, particularly those focused on interpersonal communication, as well as in cross-cultural communication, cultural phenomenology, medical sociology, social work, public health, and other health-related fields.

sandra orlow: Rethinking the Weimar Republic Anthony McElligott, 2013-12-19 "McElligott's impressive mastery of an enormous body of research guides him on a distinctive path through the dense thickets of Weimar historiography to a provocative new interpretation of the nature of authority in Germany's first democracy." Sir Ian Kershaw, Emeritus Professor of Modern History at the University of Sheffield, UK This study challenges conventional approaches to the history of the Weimar Republic by stretching its chronological-political parameters from 1916 to 1936, arguing that neither 1918 nor 1933 constituted distinctive breaks in early 20th-century German history. This book: - Covers all of the key debates such as inheritance of the past, the nature of authority and culture - Rethinks topics of traditional concern such as the economy, Article 48, the Nazi vote and

political violence - Discusses hitherto neglected areas, such as provincial life and politics, the role of law and Republican cultural politics

sandra orlow: Living Downstream Sandra Steingraber, 2010-03-23 Sandra Steingraber, biologist, poet, and survivor of cancer in her twenties, brings all three perspectives to bear on the most important health and human rights issue of our time: the growing body of evidence linking cancer to environmental contaminations. Her scrupulously researched scientific analysis ranges from the alarming worldwide patterns of cancer incidence to the sabotage wrought by cancer-promoting substances on the intricate workings of human cells. In a gripping personal narrative, she travels from hospital waiting rooms to hazardous waste sites and from farmhouse kitchens to incinerator hearings, bringing to life stories of communities in her hometown and around the country as they confront decades of industrial and agricultural recklessness. *Living Downstream* is the first book to bring together toxics-release data -- now finally made available through under the right-to-know laws -- and newly released cancer registry data. Sandra Steingraber is also the first to trace with such compelling precision the entire web of connections between our bodies and the ecological world in which we eat, drink, breathe, and work. Her book strikes a hopeful note throughout, for, while we can do little to alter our genetic inheritance, we can do a great deal to eliminate the environmental contributions to cancer, and she shows us where to begin. *Living Downstream* is for all readers who care about the health of their families and future generations. Sandra Steingraber's brave, clear, and careful voice is certain to break the paralyzing silence on this subject that persists more than three decades after Rachel Carson's great early warning.

sandra orlow: **Health Literacy** R.A. Logan, E.R. Siegel, 2017-10-18 While health literacy is a relatively new multidisciplinary field, it is vital to the successful engagement with and communication of health with patients, caregivers, and the public. This book 'New Directions in Health Literacy Research, Theory, and Practice' provides an introduction to health literacy research and practice and highlights similar scholarship in related disciplines. The book is organized as follows: the first chapter explains the still-evolving definition of health literacy; the next three chapters discuss developments and new directions in health literacy research, then a further two chapters are devoted to developments and new directions in health literacy theory. Two chapters explore health literacy interventions for vulnerable populations; four chapters cover health literacy leadership efforts; six chapters describe developments and new directions in disciplines that are similar to health literacy; and six chapters portray diverse health literacy practices. A preface from Richard Carmona M.D., the former U.S. Surgeon General, is included in the book. Although the book is intended primarily for health literacy researchers, practitioners and students, the diverse topics and approaches covered will be of interest to all healthcare and public health researchers, practitioners, and students, as well as scholars in related fields, such as health communication, science communication, consumer health informatics, library science, health disparities, and mass communication. As Dr. Carmona concludes in his preface: 'This is essential reading for all health practitioners.'

sandra orlow: **War and Rights** David L Rousseau, 2021-04-13 Warfare in Europe contributed to the development of the modern state. In response to external conflict, state leaders raised armies and defended borders. The centralization of power, the development of bureaucracies, and the integration of economies all maximized revenue to support war. But how does a persistent external threat affect the development of a strong state? The "Garrison State" hypothesis argues that states that face a severe security threat will become autocracies. Conversely, the "Extraction School," argues that warfare indirectly promotes the development of democratic institutions. Execution of large-scale war requires the mobilization of resources and usually reluctant populations. In most cases, leaders must extend economic or political rights in exchange for resolving the crisis. Large-scale warfare thus expands political participation in the long run. The authors use empirical statistical modeling to show that war decreases rights in the short term, but the longer and bigger a war gets, the rights of the citizenry expand with the conflict. The authors test this argument through historical case studies—Imperial Russia, Austro-Hungarian Dual Monarchy, African Americans in

World War I and II, and the Tirailleurs Senegalese in World War I—through the use of large-N statistical studies—Europe 1900–50 and Global 1893–2011—and survey data. The results identify when, where, and how war can lead to the expansion of political rights.
