algebra 2 regents 2023: Shifting Protracted Conflict Systems Through Local Interactions Tamra Pearson d'Estrée, 2023-12-29 This volume explores the evolution of theoretical and practical approaches to intervening in protracted conflicts, following the work of Herb Kelman. Interactive

problem solving, as developed by Kelman and others, sought to increase understanding about the microprocesses of international relations. Kelman early on emphasised the centrality of an interactive approach for constructing new identities, new narratives, and new ways forward. Transforming conflict systems requires strategic attention to the interactions between agents of change that provide stability or induce shift. This volume on interactive conflict approaches includes both critical reflections and new ideas from scholar-practitioners who have developed, revised, and expanded these approaches. Contributors take up important issues, from the shape and likelihood of solutions in intractable conflicts to how individuals can exist in realities with seemingly irresolvable inner and outer conflicts. The volume represents the best of current thinking about how the mechanisms, theoretical framework, and application of interactive problem solving should be moved into the twenty-first century context of increasing complexity, increasing uncertainty, and increasing polarisation. This book will be of interest to students of peace studies, conflict resolution, and international relations.

algebra 2 regents 2023: The Path to Equity Bill Coplin, 2023-07-03 Coplin has been saving students from the damage done by the bait and switch business model of the liberal arts programs for fifty years. The bait promises career preparation and the switch is to teach undergraduates how to be scholars. He demonstrates how the Kingdom of Liberals Arts programs are based on an elitist attitude that is harmful to most undergraduates who value career preparation over love of learning. This elitism leads to increased anxiety for college students and a college completion rate lower than the worst high schools in the U.S. He shows how the elitism does not serve equity and inclusion but does the opposite. He demonstrates that the harm is not just confined to undergraduate education but to many socio-economic conditions in American society. The Kingdom has contributed to a K-12 education system that sends too many students to college and prevents the resources needed for careers without a college education. It shares some of the blame for the lack of skill and semi-skilled labor in this country. Coplin ends on a positive note by showing that some progress in transforming the Kingdom to an institution that serves its undergraduates has occurred but much more needs to be done. He suggests three most important structural changes need to quicken the pace of change and contribute to, rather than prevent, equity and inclusion.

algebra 2 regents 2023: *Teaching Arguments* Jennifer Fletcher, 2023-10-10 No matter where students' lives lead after graduation, one of the most essential tools we can teach them is how

to comprehend, analyze, and respond to arguments. Students need to know how writers' and speakers' choices are shaped by elements of the rhetorical situation, including audience, occasion, and purpose. In *Teaching Arguments: Rhetorical Comprehension, Critique, and Response*, Jennifer Fletcher provides teachers with engaging classroom activities, writing prompts, graphic organizers, and student samples to help students at all levels read, write, listen, speak, and think rhetorically. Fletcher believes that, with appropriate scaffolding and encouragement, all students can learn a rhetorical approach to argument and gain access to rigorous academic content. *Teaching Arguments* opens the door and helps them pay closer attention to the acts of meaning around them, to notice persuasive strategies that might not be apparent at first glance. When we analyze and develop arguments, we have to consider more than just the printed words on the page. We have to evaluate multiple perspectives; the tension between belief and doubt; the interplay of reason, character, and emotion; the dynamics of occasion, audience, and purpose; and how our own identities shape what we read and write. Rhetoric teaches us how to do these things. *Teaching Arguments* will help students learn to move beyond a superficial response to texts so they can analyze and craft sophisticated, persuasive arguments - a major cornerstone for being not just college- and career-ready but ready for the challenges of the world.
