eas pay scale 2023: Impact of Terroir on the Glucosinolates Profile of Moringa oleifera Grown in Three Agro-Ecological Zones in Ghana and their Potential Role in Food Security (Band 57) Olivia Naa Ayorkor Tetteh, 2024-03-28 *Moringa oleifera* Lam. can survive extreme growth conditions by adjusting its metabolism. Among the potential metabolites produced during adaptation are glucosinolates, which possess potential cancer chemoprotective attributes. Recent climate events, such as increased temperatures and prolonged drought, impact crop yield and quality significantly. Therefore, climate-resilient plants such as *M. oleifera* can be utilized in areas where crop production is adversely affected. Understanding how terroir factors and cultural practices affect the glucosinolate profile in *M. oleifera* is important for optimizing cultivation strategies. To achieve this, the leaves from cultivated and wild-grown mature *M. oleifera* plants were harvested for intact glucosinolates analysis. Prior to the analysis, preserving the plant materials to prevent the breakdown of glucosinolates was important. Given that the use of dehydration methods such as freeze drying for the leaves is expensive and laborious in developing countries like Ghana, a locally well-suited dehydration method, namely oven-drying at 40 °C for 48 h, was identified and utilized. Results showed that during the rainy season, climate parameters did not significantly influence the total glucosinolates content in all leaf materials harvested. In contrast, accession selection, harvest time, and agro-ecological zones significantly influenced the total glucosinolate content. Fertilization significantly altered the vegetative growth parameters of the cultivated accessions, but not the total glucosinolates content. In conclusion, *M. oleifera* proved to be well adapted to the climate in Ghana. The continued collection, storage, and use of the genetic resources of *M. oleifera* accessions well-adapted to stress conditions are envisaged to ensure the species' contribution towards improved food security and nutrition among vulnerable groups.

Nature-inspired optimization algorithms, drawing on natural phenomena, offer scalable and adaptable solutions for these complex issues, making them essential for addressing CPS challenges efficiently and enhancing their role in our daily lives. *Nature-Inspired Optimization Algorithms for Cyber-Physical Systems* provides relevant theoretical frameworks and the latest empirical research findings in the area. It explores the nature-inspired optimization algorithms intended to boost the performance of CPS. Covering topics such as ant colony optimization, data analysis, and smart cities, this book is an excellent resource for teaching staff, researchers, academicians, graduate and postgraduate

students, and more.
