envision curriculum: Getting to Where We Meant to Be Patricia H. Hinchey, Pamela J. Konkol, 2024-04-24 At a moment when brawls are breaking out at school board meetings and state officials are increasingly issuing curricular mandates, it's possible that this text's central question is more important than ever: How is it that given good intentions and hard work among education professionals, things in schools can go so very wrong? As in the first edition, Hinchey and Konkol suggest that unspoken and misleading assumptions can produce choices, decisions and policies with disastrous consequences for kids. They tease out such assumptions on the key issues of school goals, curriculum, education for citizenship, discipline and school reform, inviting readers to question the taken-for-granted in order to better align intentions and outcomes. Such contemporary issues as book banning and parents' movements are presented not as isolated controversies, but instead in their historical, cultural and political contexts. Designed for both undergraduate and graduate classrooms, the text applies to a wide range of studies related to public education, including its

theory, policy, history and politics. Without proselytizing, the text asks readers to think for themselves and articulate their own commitments guided by end-of-chapter questions, some intended for all readers and some specifically for experienced professionals. Suggested additional readings, websites and videos invite further exploration of the topics under discussion and offer still more food for thought.

envision curriculum: Creating Critical Classrooms Mitzi Lewison, Christine Leland, Jerome C. Harste, 2014-08-07 This popular text articulates a powerful theory of critical literacy—in all its complexity. Critical literacy practices encourage students to use language to question the everyday world, interrogate the relationship between language and power, analyze popular culture and media, understand how power relationships are socially constructed, and consider actions that can be taken to promote social justice. By providing both a model for critical literacy instruction and many examples of how critical practices can be enacted in daily school life in elementary and middle school classrooms, *Creating Critical Classrooms* meets a huge need for a practical, theoretically based text on this topic. Pedagogical features in each chapter • Teacher-researcher Vignette • Theories that Inform Practice • Critical Literacy Chart • Thought Piece • Invitations for Disruption • Lingering Questions New in the Second Edition • End-of-chapter Voices from the Field • More upper elementary-grade examples • New text sets drawn from Classroom Resources • Streamlined, restructured, revised, and updated throughout • Expanded Companion Website now includes annotated Classroom Resources; Text Sets; Resources by Chapter; Invitations for Students; Literacy Strategies; Additional Resources

envision curriculum: Handbook of Research on Teacher Education Marilyn Cochran-Smith, Sharon Feiman-Nemser, D. John McIntyre, Kelly E. Demers, 2008-02-19 Co-Published by Routledge/Taylor & Francis Group and the Association of Teacher Educators. The *Handbook of Research on Teacher Education* was initiated to ferment change in education based on solid evidence. The publication of the First Edition was a signal event in 1990. While the preparation

of educators was then – and continues to be – the topic of substantial discussion, there did not exist a codification of the best that was known at the time about teacher education. Reflecting the needs of educators today, the Third Edition takes a new approach to achieving the same purpose. Beyond simply conceptualizing the broad landscape of teacher education and providing comprehensive reviews of the latest research for major domains of practice, this edition: stimulates a broad conversation about foundational issues brings multiple perspectives to bear provides new specificity to topics that have been undifferentiated in the past includes diverse voices in the conversation. The Editors, with an Advisory Board, identified nine foundational issues and translated them into a set of focal questions: What's the Point?: The Purposes of Teacher Education What Should Teachers Know? Teacher Capacities: Knowledge, Beliefs, Skills, and Commitments Where Should Teachers Be Taught? Settings and Roles in Teacher Education Who Teaches? Who Should Teach? Teacher Recruitment, Selection, and Retention Does Difference Make a Difference? Diversity and Teacher Education How Do People Learn to Teach? Who's in Charge? Authority in Teacher Education How Do We Know What We Know? Research and Teacher Education What Good is Teacher Education? The Place of Teacher Education in Teachers' Education. The Association of Teacher Educators (ATE) is an individual membership organization devoted solely to the improvement of teacher education both for school-based and post secondary teacher educators. envision curriculum: *Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds* Carolyn Kieran, 2017-12-04 This book highlights new developments in the teaching and learning of algebraic thinking with 5- to 12-year-olds. Based on empirical findings gathered in several countries on five continents, it provides a wealth of best practices for teaching early algebra. Building on the work of the ICME-13 (International Congress on Mathematical Education) Topic Study Group 10 on Early Algebra, well-known authors such as Luis Radford, John Mason, Maria Blanton, Deborah Schifter, and Max Stephens, as well as younger scholars from Asia, Europe, South Africa, the Americas, Australia and New Zealand, present novel theoretical perspectives and their latest findings. The book is divided into three parts that focus on (i) epistemological/mathematical aspects of algebraic thinking, (ii) learning, and (iii) teaching and teacher development. Some of the main threads running through the book are the various ways in which structures can express themselves in children's developing algebraic thinking, the roles of generalization and natural language, and the emergence of symbolism. Presenting vital new data from international contexts, the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades.

envision curriculum: *Linguistically Diverse Immigrant and Resident Writers* Christina Ortmeier-Hooper, Todd Ruecker, 2016-07-15 Spotlighting the challenges and realities faced by linguistically diverse immigrant and resident students in U.S. secondary schools and in their transitions from high school to community colleges and universities, this book looks at programs, interventions, and other factors that help or hinder them as they make this move. Chapters from teachers and scholars working in a variety of contexts build rich understandings of how high school literacy contexts, policies such as the proposed DREAM Act and the Common Core State Standards, bridge programs like Upward Bound, and curricula redesign in first-year college composition courses designed to recognize increasing linguistic diversity of student populations, affect the success of this growing population of students as they move from high school into higher education.

envision curriculum: *Questioning the Premedical Paradigm* Donald A. Barr, 2010-04-05 This book raises fundamental questions about the propriety of continuing to use a premedical curriculum developed more than a century ago to select students for training as future physicians for the twenty-first century. In it, Dr. Donald A. Barr examines the historical origins, evolution, and current

state of premedical education in the United States. One hundred years ago, Abraham Flexner's report on Medical Education in the United States and Canada helped establish the modern paradigm of premedical and medical education. Barr's research finds the system of premedical education that evolved to be a poor predictor of subsequent clinical competency and professional excellence, while simultaneously discouraging many students from underrepresented minority groups or economically disadvantaged backgrounds from pursuing a career as a physician. Analyzing more than fifty years of research, Barr shows that many of the best prospects are not being admitted to medical schools, with long-term adverse consequences for the U.S. medical profession. The root of the problem, Barr argues, is the premedical curriculum—which overemphasizes biology, chemistry, and physics by teaching them as separate, discrete subjects. In proposing a fundamental restructuring of premedical education, Barr makes the case for parallel tracks of undergraduate science education: one that would largely retain the current system; and a second that would integrate the life sciences in a problem-based, collaborative learning pedagogy. Barr argues that the new, integrated curriculum will encourage greater educational and social diversity among premedical candidates without weakening the quality of the education. He includes an evaluative research framework to judge the outcome of such a restructured system. This historical and cultural analysis of premedical education in the United States is the crucial first step in questioning the appropriateness of continuing a hundred-year-old, empirically dubious pedagogical model for the twenty-first century.

envision curriculum: Education Reform in Societies in Transition Jaya Earnest, David F. Treagust, 2006 Framed against the background of educational change, this book proposes to examine the relationship between curriculum change, teacher professional development, policy reform and the processes of educational change. The main aims of the book are to: (1) focus on educational changes and reconstruction in transitional societies that have undergone political, economic and social change in the past two decades, (2) provide a forum for the dissemination of research on education reconstruction and reform in transitional societies, (3) disseminate ideas that enhance both the practical and theoretical aspects of educational changes in these societies, (4) further knowledge and understanding of emerging trends and issues in education in these societies, (5) reflect the realities of educational scenarios in each transitional society. The book presents an in-depth exploration of educational reconstruction in 15 transitional societies. In each chapter, the authors have provided an overview of educational processes in the country, a distillation of education change or reform, and/or reconstruction in each transitional society. Collectively, the chapters in the book have attempted to contribute to a better understanding of the educational system in respective countries by identifying the challenges and obstacles, the policy implications, the teacher professional development needs and curriculum reform efforts.
