Nepal has accorded high priority to the assurance of good accountability and transparency in public sector financial management. Reforms are now critical and should be approached in an integrated way covering planning, budgeting, accounting, internal control, internal audit, external audit, and oversight. Action in only one area of financial management will not result in the same degree of benefits. The capacity building recommended in this report's Development Action Plan is designed to introduce international accounting and auditing standards in both the public and the private sectors, and to close the gap between precept and practice. ican study: Inclusion Steven Epstein, 2008-09-15 With *Inclusion*, Steven Epstein argues that strategies to achieve diversity in medical research mask deeper problems, ones that might require a different approach and different solutions. Formal concern with this issue, Epstein shows, is a fairly recent phenomenon. Until the mid-1980s, scientists often studied groups of white, middle-aged men—and assumed that conclusions drawn from studying them would apply to the rest of the population. But struggles involving advocacy groups, experts, and Congress led to reforms that forced researchers to diversify the population from which they drew for clinical research. While the prominence of these inclusive practices has offered hope to traditionally underserved groups, Epstein argues that it has drawn attention away from the tremendous inequalities in health that are rooted not in biology but in society. “Epstein’s use of theory to demonstrate how public policies in the health profession are shaped makes this book relevant for many academic disciplines. . . . Highly recommended.”—Choice “A masterful comprehensive overview of a wide terrain.”—Troy Duster, *Biosocieties*

ican study: Winning Your Blood Sugar Battle Richard MD Furman, FACS, 2019-07-02 As of 2017, more than 30 million Americans have diabetes. Another 84 million--more than 30% of the adult population--have elevated blood sugar levels that put them at risk for developing Type 2 diabetes. For most of us, it takes a medical emergency to get us to make vital changes to our eating, exercise habits, and weight control. At that point it is often too little, too late. The unfortunate reality is that 80% of diabetics will die of a heart attack. This book is the trigger for you to make lifestyle changes before any medical emergency ever occurs. In *Winning Your Blood Sugar Battle*, Dr. Richard Furman shows you the three essential steps to take in order to defeat diabetes before it defeats you. He carefully explains the latest medical literature, offers proven guidelines on what to eat (and what not to eat), and outlines an effective exercise program for keeping the heart healthy. Anyone who is diabetic, prediabetic, or overweight, as well as the loved one or caregiver who wants specific directions for supporting the diabetic in their life as they make vital lifestyle changes, will find this book a lifeline.
