spn5246: Ronald Knox's Lectures on Virgil's Aeneid Francesca Bugliani Knox, 2023-07-13 This book makes available Ronald Knox's hitherto unpublished lectures on Virgil's Aeneid delivered at Trinity College, Oxford, as part of a lecture course on Virgil in 1912. Written with Knox's customary incisiveness and with frequent allusions to contemporary life, the lectures are devoted to the appreciation of the Aeneid and focus on what he called the 'essential and dominant characteristics' that make up its greatness. They deal with Virgil's political and religious outlook, ideas of the afterlife, sense of romance and pathos, narrative style, sources, versification and appreciation of scenery. His interpretation of the relationship between Dido and Aeneas renders redundant the question, much debated to this day, of whether Aeneas loved Dido, and also portrays Aeneas more sympathetically than is currently fashionable. The additional introductory and critical essays by the contributors place the lectures in their historical and scholarly context, bring out their enduring relevance and illustrate how Ronald Knox's distinctive approach might be still developed to advantage. As Robert Speaight noted in his presidential address to the Virgil Society in 1958, 'many of us who love our Virgil will now understand him better because Ronald Knox loved and understood him so well'.

spn5246: Global wine markets, 1860 to 2016 Kym Anderson, Signe Nelgen, Vicente Pinilla,

2017-10-31 Until recently, most grape-based wine was consumed close to where it was produced, and mostly that was in Europe. Despite the huge growth in inter-continental trade, investment and migration during the first globalization wave that came to a halt with World War I, it was not until the 1990s that the export share of global wine production rose above the 5-12% range in which it had fluctuated for centuries. The latest globalization wave has changed that forever. Now more than two-fifths of all wine consumed globally is produced in another country. Europe's dominance of global wine trade has been diminished by the surge of exports from the Southern Hemisphere and the United States. New consumers have come onto the scene as incomes have grown, eating and drinking habits have changed, and tastes have broadened. Asia has emerged as an important consuming region, and in China that has stimulated the development of local production that, in volume terms, already rivals that of Argentina, Australia, Chile and South Africa. This latest edition of global wine statistics not only updates data to 2016 but also adds another century of data. The motivation to assemble those historical data was to enable comparisons between the current and the previous globalization waves. This unique database reveals that, even though Europe's vineyards were devastated by vine diseases and the pest phylloxera from the 1860s, most 'New World' countries remained net importers of wine until late in the nineteenth century. Some of the world's leading wine economists and historians have contributed to and drawn on this database to examine the development of national wine market developments before, during and in between the two waves of globalization. Their initial analyses cover all key wine-producing and -consuming countries using a common methodology to explain long-term trends and cycles in national wine production, consumption, and trade. They are available in *Wine Globalization: A New Comparative History*, edited by Kym Anderson and Vicente Pinilla (Cambridge University Press, February 2018).
