It was during this period that for the first time, co-operation between phoneticians and teachers culminated in the publication of works that were instrumental in establishing the 'applied linguistic' approach to language teaching in the twentieth century. For the first time, too, the new science of psychology influenced a scientific theory of second language acquisition. The Reform Movement attracted support across Europe, spurring the development of new professional associations and journals. In turn, the publication in these journals of reports of innovative practice contributed to a greater sense of autonomy and professionalism among modern language teachers, who had hitherto tended to live under the shadow of classical language teaching. The practical innovations and theoretical suggestions for the foreign language teaching, although rooted in the nineteenth century, still have relevance today.

vwala: *The Meanings of Things* I. Hodder, 2013-11-12 This unique and fascinating book concentrates on the varying roles and functions that material culture may play in almost all aspects of the social fabric of a given culture. The contributors, from Africa, Australia and Papua New Guinea, India, South America, the USA, and both Eastern and Western Europe, provide a rich variety of views and experience in a worldwide perspective. Several of the authors focus on essential points of principle and methodology that must be carefully considered before any particular approach to material culture is adopted. One of the many fundamental questions posed in the book is whether or not all material culture is equivalent to documents which can be 'read' and interpreted by the outside observer. If it is, what is the nature of the 'messages' or meanings conveyed in this way? The book also questions the extent to which acceptance, and subsequent diffusion, of a religious belief or symbol may be qualified by the status of the individuals concerned in transmitting the innovation, as well as by the stratification of the society involved. Several authors deal with 'works of art' and the most effective means of reaching an understanding of their past significance. In some chapters semiotics is seen as the most appropriate technique to apply to the decoding of the assumed rules and grammars of material culture expression.

Over the course of two volumes, Kubik, one of the most prominent experts in the field, draws on his extensive travels and three decades of study throughout Africa to compare and contrast a wealth of musical traditions from a range of cultures. In this second volume, Kubik explores a variety of topics, including Yoruba chantefables, the musical Kachamba family of Malawⁱ, and the cognitive study of African rhythm. Drawing on his remarkable ability to make cross-cultural comparisons, Kubik illuminates every facet of the African understanding of rhythm, from timing systems to elementary pulsation. His analysis of tusona ideographs in Luchazi culture leads to an exploration of African space/time concepts that synthesizes his theories of art, rhythm, and culture. Featuring a large number of photographs and accompanied by a compact disc of Kubik's own recordings, Theory of African Music, Volume II, will be an invaluable reference for years to come.
