Exit Exam Result

exit exam result: Statewide Exit Exams, Governance, and School Development Esther Dominique Klein, 2013 In the context of outcomes-based school governance, statewide exit exams are often expected to have a positive effect on student achievements if schools and teachers use the performance feedback from the exams for school, instructional, and professional development. However, very little is known about whether the exams are used for development at all and how this is affected by factors in the exam system and organizational aspects of schools. In a comparison of Finland, Ireland, and the Netherlands, the study therefore investigates how different exam systems and their functions, the conditions at school level, and the use of the exams for school and classroom development are associated. The study uses expert interviews and a questionnaire survey with principals and teachers. The role statewide exit exams can play in education systems is analyzed

from a governance perspective and a school development perspective and discussed with an international comparative view. Esther Dominique Klein, born in 1982, Dr. phil., is research assistant at the Faculty of Educational Sciences of the University of Duisburg-Essen. Her main research interests lie in the areas of school system and school development research and international comparative education.

exit exam result: State Assessment Policy and Practice for English Language Learners Charlene Rivera, Eric Collum, 2014-05-12 State Assessment Policy and Practice for English Language Learners presents three significant studies, each examining a different aspect of states' strategies for including English language learners in state assessments. *an Analysis of State Assessment Policies Regarding Accommodations for English Language Learners; *a Survey and Description of Test Translation Practices; and *an Examination of State Practices for Reporting Participation and Performance of English Language Learners in State Assessments. With the rise in population of English language learners and the subsequent stepped-up legislative focus on this student population over the past decade, states have been challenged to include English language learners in state assessment programs. Until now, the little data available on states' policies and practices for meeting this challenge has been embedded in various reports and professional journals and scattered across the Internet. This volume offers, for the first time, a focused examination of states' assessment policies and practices regarding English language learners. The three studies were supported by OELA, the U.S. Department of Education's Office of English Language Acquisition, Language Enhancement, and Academic Achievement for Limited English Proficient Students. State Assessment Policy and Practice for English Language Learners is of interest to researchers and professionals involved with the assessment of English language learners; state- and district-level policy makers; and academics, teacher educators, and graduate students in a number of fields, including educational and psychological assessment, testing and measurement, bilingual education, English as a second language, and second language acquisition.

exit exam result: Educational Effectiveness Theory Katharina Maag Merki, Marcus Emmerich, Monika Holmeier, 2018-10-11 Despite the advances in educational effectiveness theory and methodology in the last 20 years, important questions and issues remain unresolved. In particular, existing theoretical frameworks of educational effectiveness are only able to describe the interrelationship among factors at the system, school, classroom, and student levels and their cross-level interdependency in a very general manner. Additionally, although a large number of studies provide empirical evidence of the impact of single factors and factor constellations on student learning, the embedding of the empirically identified results in theoretical models of educational effectiveness has to be carried out more systematically in order to develop more elaborated theories of educational effectiveness. The aim of this book is to contribute to the advancement of educational effectiveness theory by discussing different strategies: including alternative theoretical models to understand educational in/effectiveness, extending the methodology to analyze processes and mechanisms of educational in/effectiveness, analyzing differential effects of processes and instruments on educational in/effectiveness, carrying out complex multivariate analyses considering manifest and latent variables, and combining theory and practice in real school situations. Taken together, the strategies presented in this book make it clear that the advancement of educational effectiveness theory depends on the advancement of educational effectiveness methodology, or in other words: from theory to methodology and from empirical evidence back to theory. This book was originally published as a special issue of School Effectiveness and School Improvement.

exit exam result: Educational Policy Evaluation through International Comparative Assessments Rolf Strietholt, Wilfried Bos, Jan-Eric Gustafsson, Monica Rosén, 2014 One of the most salient findings from the field of education is that there are huge national differences in student achievement as shown in international comparative studies like PISA and TIMSS. The shockingly

large gap between the highest performing countries (mostly in East Asia) and many European countries corresponds to a difference in attainment of two years of schooling. Although this finding has been replicated in several studies, the reasons for and consequences of such differences are currently not well understood. This book is a collection of essays and studies by leading experts in international comparative education who demonstrate how international comparative assessments can be used to evaluate educational policies. The volume is organized into two parts that address, first, theoretical foundations and methodological developments in the field of international assessments, and, second, innovative substantive studies that utilize international data for policy evaluation studies. The intention of this book is to revisit the idea of 'using the world as an educational laboratory', both to inform policy and to facilitate theory development.

exit exam result: Class Formation and Civil Society Patrick M. Boyle, 2018-10-26 First published in 1999, this study of the politics of education in Cameroon, the Congo and Kenya presents arresting empirical evidence that urban elites exiting public sector educational systems they have dominated in favour of private school networks of their own creation. Seeking to enhance their offspring's chances for survival and even domination in a world of scarce resources and limited opportunities for employment, elites see private schools as tools to shape newly emerging civil societies in Africa in their own image. From a theoretical perspective, the fresh evidence presented here shows that schooling has once again become a major social force influencing the balance of state and society in modern Africa. Re-examining an older political tradition of class analysis and integrating it into more recent civil society perspectives, the author shows that the abandonment of the unreliable education services of dysfunctional African states in favour of private schools has profound consequences for class articulation in societies dividing, once again, according to educational opportunities.

exit exam result: The Smart Society Peter Salins, 2014-02-11 The Smart Society offers a detailed blueprint for how the United States can recast its human capital policies to make all Americans—not just a privileged elite—smarter and more successful than ever before, at the same time stemming the size and cost of the nation's safety net. The spectacular, centuries-long success of the United States is based on its having determined, early on, to be a smart country, single-mindedly developing institutions and practices that enabled its native born citizens to maximize their economic and social potential, and welcoming opportunity-seeking foreigners to join them. Over the last four decades, however, the vaunted United States human capital machine has been breaking down, dimming the economic and social prospects of millions of Americans. If The Smart Society blueprint is followed, these trends can be reversed and the nation and its people can quickly regain their preeminence in the hyper-competitive and globalized world of the 21st century. This is a most topical issue today because the country's current heated political disagreements are not just about the proper size of government, but about how the United States can reverse its apparent decline and restore its historic economic and social vigor—in other words, regain its place as the world's "smartest" nation.

exit exam result: PISA Under Examination Miguel A. Pereyra, Hans-Georg Kotthoff, Robert Cowen, 2012-03-24 From the 23rd to 26th of November 2009 in La Palma island, in the Canaries, the Comparative Education Society in Europe (CESE) organized an international symposium entitled PISA under Examination: Changing Knowledge, Changing Tests, and Changing Schools. During four days seventeen leading scholars of Europe and America presented their contributions to debate the different problematiques of the remarkable phenomenon represented by the OECD Programme for International Student Assessment or PISA. PISA is not merely an educational event. It is also a media circus which involves the public rehearsal for reasons for failure or success; and even, in some cases, public and political and academic explanations about why 'failure' was not really that, and why 'success' was not really that either. At the centre of all these indications, we find the growing influence of international agencies on education and schooling which is decisively contributing to a marketisation of the field of education, in the context of an increasingly multilevel and fragmented arena for educational governance based on the formulation, the regulation and the transnational coordination and convergence of policies, buttressed at the same time by the diffusion of persuasive discursive practice. Organized in four sections entitled The Comparative Challenges of the OCDE PISA Programme, PISA and School Knowledge, The Assessment of PISA, School Effectiveness and the Socio-cultural Dimension, PISA and the Immigrant Student Question, and Extreme Visions of PISA: Germany and Finland, the contributions of this book offers a comprehensive approach of all these challenging and significant issues written from different and distinct research and academic traditions.

exit exam result: Productivity in Higher Education Caroline M. Hoxby, Kevin Stange, 2020-01-10 How do the benefits of higher education compare with its costs, and how does this comparison vary across individuals and institutions? These questions are fundamental to quantifying the productivity of the education sector. The studies in Productivity in Higher Education use rich and novel administrative data, modern econometric methods, and careful institutional analysis to explore productivity issues. The authors examine the returns to undergraduate education, differences in costs by major, the productivity of for-profit schools, the productivity of various types of faculty and of outcomes, the effects of online education on the higher education market, and the ways in which the productivity of different institutions responds to market forces. The analyses recognize five key challenges to assessing productivity in higher education: the potential for multiple student outcomes in terms of skills, earnings, invention, and employment; the fact that colleges and universities are “multiproduct” firms that conduct varied activities across many domains; the fact that students select which school to attend based in part on their aptitude; the difficulty of

attributing outcomes to individual institutions when students attend more than one; and the possibility that some of the benefits of higher education may arise from the system as a whole rather than from a single institution. The findings and the approaches illustrated can facilitate decision-making processes in higher education.

exit exam result: *The TurnAround ToolKit* Lynn Winters, Joan Herman, 2011 Lynn Winters's and Joan Herman's *The Turnaround Toolkit* is written for school leaders who are focused on transforming instruction, and who may be working under significant time constraints to reverse declining student achievement or public perceptions of school failure. Based on the evidence that simply implementing "continuous improvement" is not enough to close the achievement gap, *The Turnaround Toolkit* provides a nine-step formative evaluation program designed to achieve an immediate and consistent focus on improving instruction in order to bolster student achievement. In a straightforward and accessible fashion, Herman and Winters explain three overarching "Turnaround Tasks" that frame these steps and the necessary-and sometimes drastic-actions that must be taken by school leaders as they use data to strategically choose, implement, monitor, and revise school interventions. A dedicated, online "toolkit" offers numerous worksheets and templates that support each stage of the process and help school leaders scaffold the work of educators to put an aggressive turnaround plan into action while a leadership guide at the end of the book provides guidance to turnaround teams and facilitators.
